My best friends mum died in her sleep this morning she was unresponsive and her mouth was wide open, she died in her sleep, she had the astra zeneca vaccine on the weekend prior to that she had the Piyzer. She said last night she was shivering and had a headache its must have been a stroke/clot paramedics concluded. Will find out more when the post mortem results come. I am still in shock please keep them in your prayers

Ashley Kemp shared her first post.

So my Mother, Nan and Nan's sister all had the Astra Zeneca Vaccine within a week of each other Mum had hers first on the 29th of January. Around 3 weeks after the vaccine my 86 year old Nan woke up one morning with black eyes and bruising all over her face. She went to hospital and had tests and was sent home. Around a week later she had a stroke! A full on stroke. Luckily she is recovering but still can't speak, walk or swallow properly. She's in hospital still and could be for the next 9 weeks. A week after that my Mother had a TIA stroke! She had a three day stay in hospital and is home now but still not able to walk properly and has blurry vision. Then last night I get a phone call saying that my Nans younger sister has now had a TIA stroke too! All in cases the stroke started with a bleed in the head.Wtf!! My Nan, and Mum are both smokers and not the healthiest of people but surely this is not just a coincidence? 🙏 I half begged my mum not to have the jab. Please do your research and really think before you inject yourself. Once it's in your body that's it. It's a different type of vaccine that contains modified RNA that has not been used before.

Jamie N Lambertson 🙌

How long after taking the shot does the Bell's Palsy come into effect? I ask because someone I know came down with Bell's Palsy 3.5 weeks after the 2nd shot. She also had COVID back in December.

I'm posting on behalf of my twin brother because the Astrazeneca jab killed him ,blood clot on the lungs .

People should have been informed of the worst case scenarios if they had my brother George would still be here today because he would not have taken the jab of that I am certain ,they killed him no question.

I had planned on having the jab but no way on this earth will I have any of that poison in my bloodstream now.

Rachael Bain

Somebody I work with went home yesterday . Her nan who is in her 80's had her second jab last Tuesday and was found collapsed in her house on the sat (4 days later) she's now on end of life care after having a massive stroke and brain swellingI'm hearing so many like minded stories , this has to stop surely to god 🙏

My husbands best friend (38) went in to hospital 5 days after jab with a blood clot that went to his kidney. So far "they don't know" that its linked. He had covid last year, recovered without incident and didn't require hospital treatment. He said he won't be getting second jab.

Okay...here goes! I've been putting off writing this as it gets me so angry and upset.

My mum and sister in law's mum both 81, with other health issues, both dutifully went for their jabs early feb within days of each other, to different surgeries. Both got the Astra Zenica one.

They'd both had over a year of mostly isolation from their families, because of distance and ridiculous 'lockdown laws'.

Both were craving that family contact again, and excited and looking forward to reunions and social outings again, as were we.

My mum was still mobile and coping on her own up until then, with the help of great friends/neighbours, and my sister in law's mum had carers come in daily. She wasn't physically fit, but both still had all their mental faculties.

BOTH ARE NOW GONE, from blood clots on the lungs. One 5days after the jab, the other (my mum) two weeks later. Both in hospital. BOTH got told they had covid.... After a year of nothing??? 😞

The very people this lockdown and vaccine is SUPPOSED TO BE SAVING (THE VULNERABLE...) ARE NOW BEING KILLED OFF AFTER OVER A YEAR OF FEAR, TORMENT AND ISOLATION. 🙄😞😞😞😞😞😞😞😞😞😞

HOW IS THIS JUSTIFIED???

I am reading SO MANY SIMILAR STORIES and getting so afraid and angry that all this is NOT ON FRONT PAGE NEWS TO WARN PEOPLE!!!!!!

THANKYOU so much for the page and space to vent and SEE MORE CLEARLY.....

My father in law died 6 weeks ago after having his 1st Astra Zeneca vaccine. Yes he did have underlying health issues but they were controlled by carefully balanced medication. My wife told him not to have the vaccine as did his granddaughter but he asked his doctor who assured him it would be fine it was not fine 2 weeks after receiving the vaccine he was dead. The day after the vaccine he felt unwell gradually getting worse over the next few days the doctors told him "oh it's just the side effects give it a week " after a week he was admitted to hospital and never came back out. He has gone down as a covid death (statistic) but he didn't die of covid he died as a consequence of having the covid vaccine that messed up his normal medication. The hospital don't even need to notify anyone that his death was caused by the vaccine my wife reported it to the mhra yellow card.

I lost my 86yr old stepdad on the 12th of March due to the AstraZenica vaccine.

He had the vaccine on 6th of February at 10am. By 2pm on the 7th he could hardly move and an ambulance was called.

He suffered a heart attack 7 hours later due to a clot forming in the lung. Strange as he has been on warfarin for 15 years and checked weekly for levels. Anyway, he remains in hospital to recover only to be told 20 days later and after 8 previous tests in hospital, he tested positive and moved to the covid ward at the QEQM Margate. He remained with NO symptoms. 7 days later he died in the ward due to his heart attack. Covid wasn't mentioned on death certificate. Later that week it came out about the astraZenica vaccine causing blood clots

Andrea Heys shared her first post.

· 17h ·

My brother is on a stroke hospital ward and the patient next to him has been transferred to a neurological hospital where he needs to undergo immediate surgery due to a brain bleed caused by the vaccine. We know this because he's our cousin's brother in law. My Aunt had dementia for a few years and was given the vaccine a few weeks ago. She passed away on the 3rd April 2021. When is the genocide going to end?

Also, my friend is a nurse on a cancer ward and she said "We've had three cases of acute ITP due to vaccine in two weeks. We may only see 15 cases a year. The whole ward staff are talking about it." She's even got evidence as the it's in the patient's notes.

My brother texted me yesterday. 😞

"So Jens grandfather died yesterday.. a week after they vaccinated him, he developed a blood clot .. they removed it successfully.. however he died a few days later.. he was active seemed to be fine before all this .. he was in his mid 80's but his health was not in decline.. when someone of age dies, u usually see a decline.. meaning it rarely comes out of left field .. most of the time u see warning signs.."

My uncle had the AstraZeneca shot. He was 65, he was a strong men, Chief of the Fire department in Amealco, Mexico. He started with chills, headache and then all the covid symptoms but they where really really strong, as if magnified... and passed away the 5th March 2021. The strange thing was that 7 other people that got vaccinated with him that day died too.

Adam Turner shared his first post.

· 18h ·

About a month ago my father had the V**cine. We don't see each other much but when we spoke last week he informed me he had blocked artery's and is having to have a stent inserted in to the main artery leading to the heart as it's reducing blood flow massively. He has been in and out hospital with chest pain's since, and when I spoke with him today he has a sore throat, and flu like symptoms. I'm really worried about him. Obviously I believe these issues are 100% to do with the jab, but he doesn't seem to agree. Has anyone else on here, yourself or a relative suffered these side affects? I seriously believe these issues will end up killing my dad.

Ketaki Bhave shared her first post.

· 22h ·

I have tremendous survivor's guilt after this...To add to my issues...Other members of my family still want the jab....My grand dad passed away..and I couldn't do anything....Am hardly able to eat..Its been a week but I feel like it was yesterday...I feel like a zombie...And I wish I had stopped him...like physically flung myself on him and stopped him...But why do my other family members want to take the risk for something that will last for 2 weeks is beyond me...I cannot go through this again...He was 87 years old..Was perfectly fine before...No post mortem..no answers..he wasn't admitted to the hospital even when he complained of palpitations...He had a heart attack...

Hey thank you so much for accepting me into the group...

My mum died on the 21st of February 2021 at just 43 years old just under a month after she had the first dose of the astraveneca jab 😞
We are still awaiting the postmortem results as my mum has to undergo further testing which can take 3 months. They suspect something was on her lungs but have too dig further into it 😞
Since having the vaccine, my mum suffered many of strange effects, firstly it was constant headaches, not eating much, then she was having cold sensations in her hand, feet and nose too which the doctors assumed it was raynauds disease which she was being investigated for. Her mental health also seemed alot worse, she was having trouble sleeping too.

5 days before she died she was having really bad chest pains, I told her too go hospital but she rang gp instead, they gave her an ecg then said everything is fine and not too go too hospital 😞😞

I strongly believe it was the vaccine, my mum was fit and healthy, had no health conditions... She was absolutely petrified of getting the jab in first place but did it for the sake of the people she looked after 😞

I feel so angry because the doctors didn't do anything! She put trust into the doctors and professionals and look where it's got us 😞 I'm 22 years old, ive had too take on my two younger brothers as we have no dad and lost the only person we pretty much have 😞

I Honestly just thought it was me going through this. I didn't realise so many had lost their loved ones too the vaccine 😞

Thank you for reading. 🙏❤️

Jojo Allman shared her first post.

 · April 7 at 8:50 PM · 

My mum had the Pfizer vaccine over 2 months ago. She is in her early 70's with the usual aches, pains etc...but very independent and active. She struggled to walk a few days later for around 10 days, and felt terrible.

She now says she feels horrible and feels very shaky and terrible memory loss.

Had bloods done and they have come back fine. The doctor has now said more tests as she may have fluid on her brain.

Thank you for letting me join the group. My husband Mark suffered with asthma and developed MS seven years ago which turned our lives upside down. Since lockdown in March 2020 I'd been working from home which was great because we were together all day every day. He could wash and dress himself and he took the car out twice a week to keep it ticking over (we had an automatic car to which we'd had hand controls fitted). Then on Friday 12 February 2021 he drove us to the local walk in centre where we were given the jab. He went to bed Friday night feeling poorly and in the early hours of Saturday morning he fell trying to get out of bed and couldn't get back up. Paramedics got him back in bed and on Monday morning I contacted the GP as he could not move at all. The GP contacted the rapid response team and we had carers to wash him and physios coming in to try to get him back on his feet. Around Tuesday of the second week he could clean his own teeth, wash his own face and arms and could turn onto his side and hold himself there. In fact on the day before he died he was able to sit on the side of the bed unaided for 5 minutes. Then on Friday 26 February 2021 while me and the carers were with him he became unresponsive and the carers started chest compressions and dialled 999. The paramedics worked on him for 25 minutes (I was later told) but they couldn't bring him back. He was 57 years old. A post mortem was carried out by a neuro pathologist and at the moment I have an interim death certificate which reads 'The precise medical cause of death has not yet been ascertained' and the Coroner is investigating. I believe 100% that the jab played a part in his death.

My dad was in a care home. He had mild dementia. I had legal power of attorney and gave instructions NOT to vaccinate my dad. However they ignored my wishes. And vaccinated him on 5 jan. the home was in lockdown so I couldn't see him. I forced my way into the home and the police were called. I left before the police arrived. I got my dad out of the home on 12 jan before they gave him the second shot. He was in bed very unwell when I collected him. I took him home but he was so ill I called an ambulance. He was diagnosed with heart failure and chest infection. He passed away on 17 jan. we are taking them to court if anyone is able to support our gofundme for Richard Baylis, I have posted the link below. Please. The care home did not even call a dr or ambulance but would have left him in bed to die alone !!! They didn't know I telephoned my dad every day after the vaccine when he became extremely ill. They did not even bother to tell me. If I left my dad in the home they would have just contacted me after he had died. I did email the home and asked them to call a dr to him as he was unwell they ignored this request also.

My mom, at the age of 68 years old, newly retired, and in decent health decided to take the "vaccine". Her first shot was sometime in January. She had minimal side effects. The moderna vaccine is what was available to her.

On February 10th, her scheduled 3 weeks, is when she received the second vaccine. She received the shot around 4:00pm on that Wednesday. She made it through the night. We spoke several times throughout the day on Thursday. This time, she experienced redness and soreness at the injection site and chronic fatigue. At 9pm that Thursday night she complained of a pounding headache and stated she was going to bed. She died a few hours later. I found her Friday afternoon. I was denied an autopsy. I could not afford to obtain an independent one. The coroners office estimated her time of death around midnight. And they reported the cause of death as "unknown natural causes".

My momma was not sick. She never had Covid. And she was super cautious. She had a few medical issues but all under control and none of which were life threatening.

Thanks for having me. My uncle died two weeks after having the jab (not sure which one), but he literally dropped dead of a heart attack a fortnight after the first jabs. He was 59 and a strong healthy man. My family won't believe it's the jab but I have my suspicions

Wendy Wagstaff shared her first post.

· 18h ·

I've known 4 people die not long after having the vaccine, these are people I've known personally, and also my friends neighbour and another friends wife who was a nurse died two days after having the jab who was perfectly fit and healthy. I've known a couple die of strokes only a matter of days or weeks after having their first dose . How long are people going to keep saying it's a coincidence ! It makes me so sad 😞

Beryl Ryan shared her first post.

· April 3 at 11:37 PM ·

Hi ,

My mum passed away after having the Pfizer jab. She was 87 in a nursing home and was healthy besides having dementia and arthritis. I have commented on another post but I will go into more detail here. She had the jab then 5 days later her hand swell to 3 times the normal size. We requested a doctor see her but after 2 days doctor hadn't come so we called an ambulance and took her to casualty. It was found she had a blood clot in her shoulder.

Then the doctors did X-rays and scans and came back to us with mum was in her final stage of colon cancer. That's when the alarm bells started ringing. Then they came back to us with she had a second cancer in her shoulder and that's what had caused the blood clot. Right Mum was in a nursing home assisted with personal hygiene so why the hell did we not know she had colon cancer. Not one sign she hadn't lost weight gained weight no loss of appetite no changes in her bowel nothing. We have asked for her scans from the doctor at the time his answer to that was why would you want them they are of no use to you needless to say I said a lot back to him and we are still fighting for her scans. Our mum was discharged from hospital sent back to the nursing home for palliative care where she died 5 days later. We are still trying to get answers we are just more or less told go away we have nothing. this is her hand after the jab

Sarah Southard shared her first post.

· March 30 at 8:57 AM ·

My fit, healthy and extremely active 64 year old mum had the pfizer vaccination on the 19th Feb at 3.50pm and had a heart attack less than 12 hours later. She had no underlying health issues and had recently had a health check with the GP which she was so proud to have walked out of there perfectly healthy no concerns at all.

I have not yet heard back from yellow card despite myself and the ICU consultant reporting it.

Anyone who knew my Mum knows this should not have happened to her. There is an inquest into her death to look at the timeline of events of which the coroner agrees the vaccine is relevant to. ❤️🙏

My father's cousin, 85. Mild dementia but living in a very posh residential care home in Kent UK. Had Pfizer, nose bleeds followed, and she just could not get warm. 16 days later, she was found totally dead by the care staff, having seen her ok two hours earlier. Because of sudden death, had to be a post-mortem. Result was listed as a massive stroke that took her in one instant blow. Often, a stroke finally takes you over a few days, it doesn't usually take you in one total go?

Tina Turner shared her first post.

· April 1 at 3:09 PM ·

Hi, my dad was in the clinically vulnerable category, he had been isolating again, and he had been well. He received the astrazenica vaccine on the 9th of Jan 2021. However on the 20th January my mum had to call an ambulance because he had a stroke, he was admitted to walsgrave hospital. After being assessed they confirmed he had a blood clot on his brain, this affected his speech, and movement down his left side. Prior to his admission the day before, he told me he didn't feel right, he said he had tried to turn the kitchen tap off but he couldn't, he knew how too but struggled, he thought he had onset dementia. He had been in hospital for three weeks to learn he caught covid from being in close contact with another person, when hospital staff were questioned, they said he caught it off another patient 😡
16th February my dad passed away. I am so angry with the government. I am so sorry to hear of your losses, someone should be held accountable for these deaths 😞

 · 1h · 

My father had the az Feb 20th. March 6th, he collapsed with two brain aneurysms, his wife gave him CPR for 15 minutes (I'm convinced she saved his life) till the ambulance arrived, he was rushed to hospital, had the aneurysms operated on, during which he developed a blood clot in his leg, which has now been amputated above the knee. He was in and out of a medically induced coma for 17 days, he is only now starting to be able to form full sentences again. I am the only person in my family that will not have the jab. I have been shouted at, called an antivaxxer, had my aunt demand to know why I won't be having it and very clearly but silently judged, all for having the audacity to question the media/narrative and exercising my right to choose what goes into my body. Noone else seems to have made any connection between him having the jab, and all the blood issues, all because he had a minor heart attack over 5 years ago, yeah it could all be a coincidence, but it could also have something to do with the jab, and it's not lost on me that 'they' are now advising under 30s to have an alternative to the az because of blood issues.

I don't know what the point of this post is really, but I know if I air this concern to most of my friends and family they will judge me and think I'm nuts. I'm not nuts, and I can't ignore the fact that my relatively health father almost died 2 weeks after having the jab.

Nicola Snell shared her first post.

· Yesterday at 3:20 PM · 🌐

Forwarned our parents about the jab.
Farther in law fit as a fiddle aged 80, had mini strokes , now on blood thinners, a few weeks after the jab.
Mum early 70s , problems with her chest , weeks after the Oxford jab.
They have put it as coincidence, but I know it's from the jab.
They have yet to have the 2nd .
There's nothing I can say or do, I have warned so many on how dangerous it they are.
Unfortunately it's when people are dying , that's when they will realise , but it's too late as it cannot be reversed.

Donna Thomas shared her first post.

My quite healthy aunt of 84 had her first v** on January 11th. She became very poorly with pains all over her body, a chest infection and started to become very confused . She wasn't responding to the anti biotics but had her second v** 3 weeks ago while in hospital. She went down hill immediately and passed away 7 weeks after her first v** with clots to the heart.💔💔💔 The doctors said it was a coincidence.

My other uncle was a very fit active 84 year old with lots of outdoor hobbies of gardening and pigeons , he also had the v** around January . Initially he had flu like symptoms but became very confused. After recently having the second dose he's been getting lost, going into trances , he has been falling over and had to be admitted to hospital . Within 8 weeks he is a shadow of himself , he's been having tiny strokes so he has now been moved into a nursing home . When he does wake up he is crying for his mother and father. It's totally heart breaking💔💔💔.

And ... My mother has had her second v** . I begged her to wait she could always have it later. But due to mainstream media pressure she felt she should have it to help with the pandemic. She has since forgotten her best friend passed away last year, she can't start a jigsaw puzzle or suduko, she has ' forgotten ' how to knit and talks to me sometimes thinking I am her sister in law !!! She even called me a liar when I reminded her niece had passed away years ago. Then she suddenly remembered. Since she had the v** it's as though she has suddenly developed Alzheimer's in a few short weeks 😞😞😞😞💔💔

My Pop was 94...healthy..mentally and physically...could answer bible trivia like a 20 year old. He got his 2nd shot on Thursday, February 11th...early Tuesday morning February the 16th he got up and must not have felt well and pulled the emergency cord in their bathroom in their retirement village he and my Mom lived. He seemed to have had a stroke..he was rushed to the hospital where a scan showed he had a major brain bleed...it was so bad it pushed his brain to one side. There was nothing that could be done. We the family moved mountains of red tape to get him transfered back to Mom in their room where he died peacefully on February 21. It is amazing he lasted that long..but if you knew my Pop he was a tough old bird...an Air Force Veteran and I believe he didnt want to leave his beloved wife. I know it was the vaccine and after reading some of these heartbreaking stories I am even more convinced. My heart goes out to all who have lost loved ones. I know and feel you pain. 🥲🥲🥲 This was at his 93rd birthday...I miss him so much 🥲🥲🥲

Hi my sister in law had the Oxford Astrazenca vaccine, ever since she had it 3 wks ago she has been in severe pain with bowel this pain came on within 6hrs after having it. This pain went on for 5 days with sickness & diarrhoea getting worse by the day! She has now started losing blood clots & blood from her bottom. She has been to the doctors who have told her this is not related to the vaccine, she is currently waiting for results back. But I personally think its to do with this poison they are trying to pump into us!! Has anyone else had these kind of symptoms please?

January 25th 2021 (Monday) my mum received the Pfizer vaccine, she came home felt tired, went for a lie down, next day (Tuesday) stayed in bed she was still feeling very tired, that evening around 6pm she started a little shake in her body, (Wednesday) morning my dad called me, said theres something wrong with your mum can you come down, I lived like 10mins away, went stright down, went in and looked at mum, she was crying with worry, her mouth was twisted her tongue was in spasm and her body was in a full blow shake, I thought she was taking a stroke, I called for an ambulance straight away, they came and ruled out there and then that it wasnt a stroke, so they took her to the hospital around 1pm, (on her own) a few hours had passed and we heard nothing, I called and called the hospital but no answer, I tried mums mobile again as before there was no answer, but I got through to her, she was sitting in a corridor in a trolley waiting for a covid test to come back before she got to see a doctor, she was terrified, she called me at 8pm to ask me to come collect her, took me 25mins from my house to the hospital, she was sitting at the door way waiting, I basically had to carry her into the car, doctor said she has had a bad reaction to the vaccine and to go home and rest and take paracetamol, he also said do not take the second dose as it will kill you, we got her home and she went straight to bed, she couldnt eat from she got the vaccine as she kept vomiting or had diarrhoea, (Thursday) she stayed in bed all day very l'll, still no food, she was put on dialysis 8 months prior to the vaccine, and had got a new lease of life, was doing well, (friday) she had to go for dialysis but she couldnt lift her head of the pillow, I called the dialysis ward and they said to leave it till Monday till she was feeling better, (Saturday) still in bed not able to eat, (Sunday) still the same as Saturday 😞 (Monday) she had to go for dialysis but again she couldnt go, I called the hospital and they said to call an ambulance, so she left for the hospital around 11ish, she was taken for dialysis but she couldnt receive it as her blood was clotting, next day she was able to receive it as they had got the blood thinned out, she still hadn't had any food and was totally exhausted, she went for a chest xray, it came back clear, on the Thursday she went for a ct scan, it showed she had a small infection in her bowl but she wasnt treated for it, on the Friday she received her dialysis and was sent home, the Saturday Sunday and Monday she started getting weaker and weaker, her blood sugars where low and her blood pressure was over 200, I called an ambulance again, at this stage she was sweating and her body was on fire she was so ill, this is now into the third week, I had to fight to get a feeding tube in to help her, she was losing weight drastically, she had sepsis as the week went

on she kept deteriorating, we still didn't get to see her, we started getting video calls with her every evening she could hardly talk to us it was awful, on that Sunday I got geared up with all my ppe on from head to toe, I wanted to see my mum we were so close, I went in to the hospital up to the 5th floor rang the bell and asked if I could see my mum, I was told no, I said but she's so ill and deteriorating and they said she wasn't ill enough for me to get in to see her, I cried and begged them but it was still a no, I was heartbroken all day, then the Tuesday after my mum got the feeding tube in, at this stage she was still vomiting and diarrhoea, the next day (Wednesday) she was vomiting uncontrollably (blood this time) the doctor said she needed to go for the camera into the stomach, so while I was on the phone I begged for us to see her, he said yes, so we all left straight away for the hospital I walk in and got the shock of my life, my poor wee mum lying there not able to move, her wee eyes staring up at me, she held my hand and whispered it must be bad that they have allowed you in 😞 she left for the camera test and we had to go home again, waited for the call, phone rang few hours later, doctor said her spleen was opened and bleeding, she had a burst ulcer and the lining of her stomach was bleeding, and that they had to do an operation to close the spleen, then she was taken to UTC, doctor called again and give us hope, said everything went well and he would call us in the morning, next day (Thursday) doctor called to say I'm sorry but it's time we made your mum comfortable that her bowel was infected that the infection had spread over the bowel wall into her blood, for us to come up when ever we were ready, absolutely devastated we all left for the hospital, got there at 4pm, only allowed in 1 by 1, my mum was in severe pain she asked my dad to pick her up and carry her home 😞 we sat all night with her taking turns, after 8 morphine injections and the drive in her pain didn't ease, the doctor came to apologise as they couldn't get her pain under control, I took my camper up to the hospital car park, and at 6am on Friday morning I went down for a dose, I wakened at 8am phoned in to ask how mum was doing, and they told me my mum was away across the hospital for dialysis, I couldn't believe what I was hearing, I asked her was she joking as we were sitting with her all night as she was dying, she apologised and said your mum has just come back onto the ward and I need you up here right away, I run up and my beautiful wee mummy took her last 5 breathes, I held her so tight I couldn't believe she was gone, she passed away at 10am on Friday 26th February, I have lost my best friend my mum my everything, the suffering she went through for 4 whole weeks will stay with me for the rest of my life.

In 4 weeks my mum lost 3 and a half stone in weight and suffered a horrendous death 💔

Sorry for the long read but I just want people to know what my poor mum went through, these vaccines are poison, I will fight to my death

to get justice for my mum
My mum was murdered 💔
Thank you for reading

Quick post. My 80yr old nan had the Oxford vaccine. 3 weeks later, heart attack, went into hospital for 2 weeks. She had a blood clot that was starting to block one of her arteries which cause it. Apparently she did have a narrow artery. She's now on multiple pills she has to take every day which are making her sick and dizzy. Luckily I think she's on the mend now but at her age it was very scary.

Secondly, my 60 yr old mother in law had the same astrazeneca vaccine. Within a few days she was feeling dizzy and collapsed multiple times. Took Her into hospital last Friday as the advice from her Doctor. Her heart rate went down to 37bpm and has not gone above 50 since she's been in. She's had multiple ECGs and had an MRI today to find out what's going on. Having a pace maker fitted this afternoon and hopes to be out by the weekend. There are 5 other people on her ward, all different ages in for the same reasons and all had the AstraZeneca vaccine.

No one in my family had previously been effected by the "virus" in the last year and a half or however long it's meant to have been around and we don't know anyone who has had it. Yet this vaccine has caused two major incidents.

Luckily my dad, mother, sister and girlfriend are not having anything to do with it. We all think it's a complete scam. My kids won't be having it either.

· April 15 at 8:58 PM · 🗿

Two weeks after the AstraZeneca vaccine i was diagnosed with deep vein throbosis. I'm 64 and never had anything similar in my life. Coincidence? I don't think so. Ironically it was only because of people and European governments bringing up the possible connection (even though our government were point blank denying it) that i went to the doctor with my symptoms which i may have otherwise ignored, i was sent for an urgent scan next day and put straight on meds. It seems I'm making a good recovery, but I'm sure there are many others who will find out too late

· 5h ·

My dad was 63 and in a care home. Nonverbal, but he was doing really well, ambulatory, eating, interactive, etc, ALWAYS excited to see me, and you could see it in his eyes and smile. In October my sister and grandmother told me that they were considering having him vaxed. I BEGGED them not to bc he'd been declining due to isolation. Neither of them ever listen to me. The care homes were the first to receive the vax. 11/19 my sister told me that they were going to vax everyone bc there was an outbreak, but no worries, Dad was fine and tested negative, he'd be first in line. 'WHAT?!'. A nursing student had brought it into one side of the facility and all of it was locked down. No more window visits, he was four hrs away. 😞. On the other side everyone was getting the Pf vx. On the 21st he was neg, last of the three vax days, on the 22nd he was found in the floor, prone and unresponsive, was now suddenly C19 positive 😞, on the 23rd he was loaded onto the ambulance and sent across the state to a hospital near us. The nurse said he came to briefly and looked terrified, until she told him he was home and we were on the way. His brain was so badly inflamed that there was virtually none left when they did the scan late that night. 😞. My sister was allowed to sit w him until he passed in the early morning hrs of the 24 th and we all facetimed our goodbyes. It's hard bc they just passed it as a C19 death when I feel it was the vax. How are all his tests neg until poke day, then he's deathly ill and suddenly it's NOT the jab bc the OTHER WING has problems? Any dumbass knows you will have a pos result after a vax, WHERE has the sense gone? Since then our family has been split bc several members are ardent about everyone being vaxd, and I am unable, unwilling to be so. It's unsafe for me, yet they do not ca

My Mother received her 2nd dose of Moderna vaccine on March 12, on March 17 she collapsed in the kitchen I was able to give her cpr while my daughter called 911 they transported her to hospital where they continued to try to save her, she passed away a few minutes later, the Doctor said her heart was having a hard time due to near by blood clot. They sent her to Coroner to do autopsy ❤️

Cici Ismail ▸ I had the Astra Zeneca Vaccine and...

April 14 at 6:56 PM · 🌐

I had my Astra Zeneca on the 27th of March, I felt terrible sick for 2 days, day 3 got out from the house for a little walk, I got very tired and I had a sharp pain in my chest, the pain was on and off at effort, in another few days became permanent and unbearable. Called the GP and then 111 on Thursday the 8th of April, ambulance took me to the hospital, tests, investigations, pain still there, on 10th they performed an angiogram to discover that I have a blockage on the LAD artery, main artery to the heart, caused by a blood clot, stent inserted, also they said that I had a heart attack sometime that week, they don't know when. I am only 48 and I will never be the same, I was fit and healthy, now I have to be careful with everything, to take 5 tablets every day and have permanently a card in my purse saying that I am on antiplatelet drugs. They ignored me every time when I said about having the vaccine recently, they wouldn't admit that is related to my new condition and this happened with every doctor and nurse I talked to.

Brother in law received the covid vaccine, not sure which one yet. But not long after it, he had a stroke, ended up in a coma. Sadly past away days ago. Dosnt seem to be much of a wake up call for the family as his wife has been fine after getting it. Scares me how much of my loved ones are getting it.

Adele Shiffer-Anderson shared her first post.

· 10h · 🌙

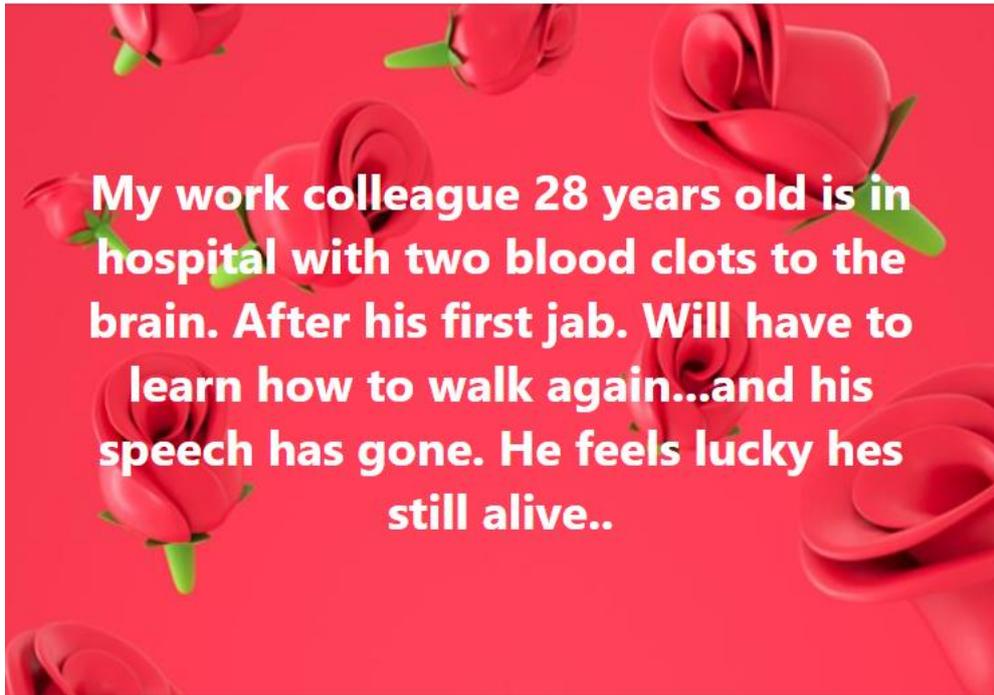

My younger sister died February 21 st. She developed blood clots in her lungs after she got her 2nd covid shot. As she was hospitalize she also got diagnosed with stage 4 ovarian cancer, they put her on blood thinners , then they started her on chemotherapy before her blood clots were cleared. A week after her first chemotherapy she suffered 2 big strokes which destroyed her brain. From the blood clots. Her organs started to shut down and her heart was the last to shut down. (she originally refused the shot and was told she could not work unless she got the shots. She was the main breadwinner in her family). She would have been 63 march 28 💔 she did not die from the cancer! It was the blood clots that caused her strokes.

Danielle Calvert 🙋

Im 31, community carer and had to have covid tests every week because of my line of work, these caused me to have a brain aneurysm and x2 bleeds on my brain. I had to have emergency surgery, im lucky to be alive and lucky to have had a brilliant recovery. Not a cat in hells chance i will be having another test or the jab. I dont know if it were the tests that definately caused it but i was perfectly healthy before having them 🙄 sorry to hear about your friend 😞 x

My father in law was pretty rough after his first AZ jab but wanted to go ahead with the 2nd. Twelve hours after having it he had a bleed on the brain. The emergency 999 services were not initially very helpful, it took two calls before they came out. He has been in hospital now for more than two weeks as he contracted a chest infection as a result of it. He seems to be making good progress but now I am concerned in case he gets covid the longer he is in hospital due to the high risk in hospital settings. Today we hope to find out if the antibiotics have worked & if he can come home asap. All the family is hoping he can come home very soon but I am very concerned just how many people are having serious side effects.

Jane Borley shared her first post.

My aunt and uncle got the shot while at their winter home. 3 days later my aunt messaged me

"He died this morning. He called my name, collapsed, had a seizure. Heart rate was racing. EMTs intubated but he died on the way to hospital."

A man with no history of heart trouble. Physically fit; his organs failed and the only thing he could donate were eyes, skin and bones. They called it "Acute Cardiac Arrest"

Jennifer Brant shared her first post.

· April 17 at 10:20 AM · 🌐

My father in law, 69, highly active, fit and healthy with a full physical 1 month prior; All labs perfect, perfect cardiac and respiratory health. He did have something called essential tremors which is a non progressive neurological problem that causes some tremors and in his case a shaky voice. That is all. He had the Pfizer vaccine without any noticeable affects and on day 16 he suddenly, out of the blue gasped for air and had "stridor" of the upper airway which progressed to respiratory arrest then full cardiac arrest. He survived it and after CPR and intubation he was awake in the emergency room about 35 minutes later without any deficits. The doctors were convinced he had a cardiac issue... and after ruling out a heart attack the doctors swore it was an arrhythmia. So they fully worked him up for an arrhythmia though it was confirmed he was in PEA in the field, never in an arrhythmia. So, they put in an AICD and sent him home from the ICU (he now had aspiration pneumonitis, a broken sternum, and 2 broken ribs from the CPR) so he went home in oxygen. He left the ICU and went straight to the pharmacy to get his second Pfizer shot because the doctors at the hospital insisted he get the second vaccine and convinced him that the vaccine had not caused the first arrest.

On the fifth day following the second shot (he had been feeling his best this day since being released from the hospital) he developed diarrhea then suddenly arrested again, crying out that he couldn't breathe followed by his second sudden respiratory arrest, and PEA again. This time he was down for too long (probably 10 minutes without oxygen) before paramedics got there and he sustained anoxic brain injury so severe there was no recovery after a week in the ICU. The first arrest his lungs were healthy and paramedics were there sooner. The second time he didn't have the reserve.

When we arrived at the ICU of the second hospital the cardiology team interrogated the AICD and confirmed there had not been a shock and therefore the event was certainly NOT cardiac related and had to of been respiratory, of which he has zero respiratory medical history.

The doctors at the second hospital agreed the situation both times was extremely puzzling and they contemplated vaccine reactions however they stated they had no idea what we would test for and have not seen any vaccine reactions they were aware of so had no idea how to approach the issue. At the end of the day my father in law was brain dead so the search for the cause was not of interest for the

medical team.

The take home here is this man who was healthy, young and vibrant reacted to BOTH doses of the vaccine. He had a second chance after the first vaccine but because of our healthcare workers who seldom question the system, they convinced my father in law to get his second vaccine and now my husband is without a father, my mother in law without a husband and my children without grandfather. I am one out of my whole anesthesia department who refused to get the vaccine. All my other medical co workers trust the system explicitly. We have to make changes and stop this from happening.

· April 16 at 7:20 AM · 🗿

My Pop was 94...healthy..mentally and physically...could answer bible trivia like a 20 year old. He got his 2nd shot on Thursday, February 11th...early Tuesday morning February the 16th he got up and must not have felt well and pulled the emergency cord in their bathroom in their retirement village he and my Mom lived. He seemed to have had a stroke..he was rushed to the hospital where a scan showed he had a major brain bleed...it was so bad it pushed his brain to one side. There was nothing that could be done. We the family moved mountains of red tape to get him transfered back to Mom in their room where he died peacefully on February 21. It is amazing he lasted that long..but if you knew my Pop he was a tough old bird...an Air Force Veteran and I believe he didnt want to leave his beloved wife. I know it was the vaccine and after reading some of these heartbreaking stories I am even more convinced. My heart goes out to all who have lost loved ones. I know and feel you pain. 🥲🥲🥲 This was at his 93rd birthday...I miss him so much 🥲🥲🥲

Thank you for the Add.

I'm here after telling my story and a few people had suggested I join your group.

I had received a call from my dr to book my covid vaccine appointment.

I attended this appointment on the 16th of February. I was asked if I was pregnant. To which I replied yes.

They went and found a dr who was on site and she explained that she had to make it clear that there hasn't been enough tests on pregnant mothers to be sure of the risks.. however she did say she wouldn't think the vaccine would reach the baby.

I went home, I had a headache and a sore arm ... I wasn't too concerned,

5 days later on the 21st of feb .. I woke to blood just pouring out of me, I was hemorrhaging and I lost 4 pints of blood as well as my baby at 17 weeks.

When the paramedics arrived I had mentioned that I had had the Pfizer vaccine and could that have caused this. He was quite adamant that it wouldn't have done, he praised the vaccine as he had recently received it himself.

I have not voiced my concerns since I feel maybe I won't be heard.

But it may be coincidental, but given the timing of my loss. I can't help but wonder if this was caused by the Pfizer vaccine.

10h ·

Someone from the local market was saying how he had both jabs, that there was nothing wrong with him & was encouraging others to get the jab.

He died a few days afterwards!!!

Just another "coincidence", I suppose.

Lacie Parker shared her first post.

· April 16 at 11:58 PM ·

An elderly family member received the first shot (I think Pfizer) early March, had a bad reaction and ended up in the hospital. Grandkids begged him not to get the second one, but did it anyway. Was immediately dizzy and feeling poorly. Died the next morning of "cardiac arrest" in his wife's arms.

Codi Lam

Yes. I mentioned in another post that my friend works in a nursing home of about 200 residents. After the vaccine roll out, 20 of them never came back.

And if you read the details of the Vaccine Adverse Event Reporting System, many of the injured and deaths are seniors.

10% being injured or dying!

My 72 year old friend has been so isolated & felt so incredibly sad & lonely during lockdown . So brainwashed & in fear about the risk of getting covid that he wouldn't let me visit at all (not even happy to meet outside). He has no family. Of course we talked on the phone but he became so depressed over time that he took it upon himself to cut his wrists. He failed in his attempt to end his life & is being treated in hospital. They gave him the 'vaccine' there and within days he has had a mini stroke & lost the sight in one eye. None of this should have happened IM ANGRY at the government for doing this to all of us. This is NOT OKAY. His story is just one of many thousands. Lockdown has killed and will kill so many as will these jobs. I feel angry and frustrated. My partner and children want the job. It makes me feel so alone & frustrated when no one is listening or believing. How do we fight this and get the message out there?!!!

Hello everyone, I'll just do a quick introduction. My name is Tashia, I'm a happily married momma of 4 and Abbi (grandma) to 3 boys. I'm also a naturalist. My family and I don't believe in vac-cines or anything that our common sense tells us to stay away from, which would be this so-called COvid vac-cine, or science experiment. We've heard of 4 deaths in our county so far that we know personally that have died quickly after vac-cination. My son-in-law's uncle, who was in decent health for his age (late 60s), after receiving his 1st shot almost immediately felt sick, light-headed, headache, nausea, etc. He went home to get some rest with having to go to the ER for feeling much much worse that evening. The medical professionals didn't seem concerned in the least bit, told him to go home, take some ibuprofen, and follow up with primary care physician the next day. He went home and passed away hours later. This is happening everywhere, but of course it's being hushed. It's wrong! This should have never been allowed to happen. This type of vaccine has NEVER been successful in the past.

Thank you for accepting my request to join. My father who is 85 yrs of age suffered severe bruising/blood clotting from his elbow to his shoulder in the arm he was injected with this poison.

I myself work in an office with many people who have chosen to have this poison injected into their bodies. All over the past year there has been a skeleton staff of myself and 3 other colleagues continuing to work in the office and these 3 colleagues all went of in their break to get injected. They were all unwell for days and although I did not have any injection myself I suffered a severe and blinding headache for 4 days. I firmly believe this came from being in close proximity to my colleagues while this poison was cursing through their poor bodies ❤️

My Aunt , 58 years old had the vaccine in India, probably the Astra Zeneca vaccine. Complained of diarrhoea and feeling sick , the Dr was called but did not come because of COVID. She lay down, the next morning , she passed away . Her only issue was a slightly elevated blood pressure . He husband 71 years old, my uncle lips were swollen after the vaccine.

This death was 100 % due to the vaccine . No autopsy , the body was cremated within 3 days .

Waheguru 🙏🙏🙏

I'm also in the UK....I know someone who now has either lupus or fibromyalgia after the vaccine, the Drs are trying to figure it out

My 96 year old Mother-in-Law had the first Moderna jab on March 11. One week later she was having sever spasms on the right side of her face that progressively worsened. She has been diagnosed with Trigeminal Neuralgia and put on seizure meds. The pain was so severe she could not talk or eat as it worsened the spasms. Meds are helping for now. She doesn't plan to take the second one at our insistence. Anyone else have a loved one experience this diagnosis after the shot?

Chris Strong shared his first post.

My grandfather got the death Jab back in January. He was celebrating my late Omas birthday, glass of champagne, talking like normal ect
Next day, unresponsive, on oxygen
Sunday morning same thing
He died in January, Monday morning at 7:30am
Doctors called it a heart attack/natural causes
Wouldn't even test for the vaccine as the cause
We all know it was the vaccine, except for a few family members in denial, the same ones who refused the investigation.

Janice Mackin shared her first post.

Thank you for adding me ❤️. It is very much appreciated.

My 80 year old mum had her first AZ jab on 30th Jan. A few days later she had severe pains in her lower back which continued, over the next few weeks to worsen then, spread down her right leg.

She is now unable to walk unaided and has been bedridden for weeks.

My mum, and my 81 year old dad's quality of life has changed so much. Mum cannot go to the bathroom on her own or wash or dress. Although dad has arthritis & COPD, and mum has peripheral neuropathy, they were both very self sufficient previously.

Mum's pain is 24/7 although she has recently been prescribed Gabapentin which does seem to ease the pain for a few hours.

She had visited the GP on 12th Feb, due to her backpain, then had an xray at A&E, on 17th Feb which showed signs of arthritis (are there many 80 year olds who do not have signs of deteriorating bones, particularly in the spine?). However, she did not have as much as a twinge in her back previous to the jab.

When the pain moved down, into her leg, she was advised that she had sciatica.

But, on 4th April, she phoned me in tears, telling me she wanted to die as the pain was so intense. She was not eating nor sleeping. It was heartbreaking.

I called NHS 24, and cutting a very long story short, after just under a 6 hour wait, an ambulance arrived to take her to A&E.

In A&E she spent over 7 hours, lying in a cubicle, on her own, being ignored when she needed the toilet or wanted her bag with water or painkillers (they refused to let me sit with her or I would have been there to help).

I was told to go home after 3 hours (by then it's after 11pm).

Then at 3.15am, having not been examined, not a hand layed on her and no discussion of pain relief, she too was advised to go home.

But, if she wanted/needed an ambulance she would have to wait until that evening, over 12 hours later.

I phoned my son who collected his gran, carried her into his car and was met by my hubby, at her home, to help carry her upstairs to her bed.

She just wanted home, she was exhausted, and couldn't believe that no one had helped her in the hospital (although, they did give her a zimmer which turned out not to be for her height!!).

I spoke to her GP, on 6th April, who stated that the timing with the jab was just a coincidence and, that there had been NO similar reported side effects, caused by the AZ jab, to those suffered by my mum. I directed him to the MHRA data and quoted figures of similar reactions in the 10,000's.

I asked if mum could be referred for an MRI scan, as Transverse Myelitis (TM) may be a possibility, which he initially refused stating that could not be the case. But, then he changed his mind and agreed to a referral. Not for TM though, but to check she did not have an issue with the discs on her spine 😞.

We are still waiting on the MRI scan to be done. But, it was only a few weeks ago.

I requested that neither of my parents be contacted for their second jab, until an adverse reaction, to the first, had been ruled out. GP was furious!! Almost shouting that my parents were at high risk from Covid and that I should put my feelings, re the jab, aside and put them first!!!

Twice the GP surgery have called asking them to attend the surgery for the 2nd jab. Knowing fine well my mum couldn't get there, even if she wanted to!!

So, mum now has a commode and rails around the toilet with a raised toilet seat. We are awaiting a handrail by her bed, a stairlift and a walk in shower.

She is seen by a physio, an occupational therapist and the hospital at home team who all visit her regularly.

I had asked my parents to delay the jab, even for a few months to see if there were any reported adverse reactions.

I advised them that they would be taking part in a clinical trial not due to end until 2023 at the earliest.

Sadly, they did not believe that the government and media would lie or that their GP would cause them harm. My poor wee mum is one of the many who appear to be examples, of this not being the case 😞
Sending love, light and hugs to each and every one of you ❤️ xx

Two family members had issues:

My grandmother passed:

She was 103 and ok with dying and living with assistance. She received two Pfizer doses and died 6 days after dose two. Nothing was reported except by me for the family to the VAERS collection people.

My dad had pneumonia in his lung after dose one:

He was 83 when he was given dose one of Moderna. His annual TB chest X-ray for his living place was taken after and showed pneumonia in a lung. So they treated it with antibiotics. He received his second dose a few days after. He had rough days after. He seems mostly ok now. But we were scared for him also.

Lori Ann

My 88 year old father in law had 1 Moderna shot and developed pneumonia, fluid on the lungs and a blood clot in his lungs.

Nobody in my family believes that this had anything to do with the vaccine

Like · Reply · 10m

Gina Melody Jean

So tragic. J&J made a statement that the other vaccines have blood clot issues as well! This was of course denied by the other companies.

Hi all I had the AstraZeneca vaccine, ever since I've had severe chest pains and back pain. Keep feeling a bit short of breathe. I've not felt right since I get tired very quick. Appetite up and down. I'm only 29 and I'm scared I'm going to die.

EVERY SINGLE ONE OF THESE PEOPLE IS A WITNESS AGAINST THE VACCINES THAT ARE BEING DISTRIBUTED BY THE GOVERNMENT. THE PHARMA COMPANIES CANNOT BE HELD LIABLE, BUT THE GOVERNMENT HAS NOT PROVIDED INFORMED CONSENT AND IS GUILTY A THOUSAND TIMES OVER.

Edit* I tried to read all the kind words you all have posted. I cannot. It's too overwhelming. Too many people are going through the same thing as me. It's Unfathomable.

My dad received his second dose. The day after, he had stroke like symptoms. He never regained consciousness. I miss my dad. He died.

Laura Richardson Murray shared her first post.

· April 16 at 12:01 AM ·

My mother received the Moderna vaccine on February 26th. On March 11th she called me to come get her and take her to the hospital. Her platelets were 10,000— extremely low. The next day they called in a specialist who diagnosed her with TTP ... low platelet and clotting disease that is extremely rare. They began aggressive treatment with plasmapheresis that evening. She appeared to be getting better but then made a downward turn and she passed away in March 19th.

Cindy Edwards Morgan

I know 2 older gentlemen that both received the vaccines. One suffered a stroke and is in the hospital with blood clots. Another is a neighbor, he was coughing and told me not to worry, he does not have covid he had both his vaccines. He was coughing because he has blood clots, was recently in the hospital this cannot be a coincidence

On March 26th, my grandfather 78 years old got his covid-19 vaccination, he right away started feeling ill. On March 27th, my uncle found my grandfather passed away in his apartment. They say he died instantly...he had his dinner made and was sitting down to eat...on April 3rd, my great aunt (my grandfathers sister) received her covid 19 vaccination and began to not feel well, 24 hours later on April 4th (the day of my grandfathers wake) she was sent to emergency. They resuscitated her, but she later passed away....with in 1 week I lost 2 family members that were not ready to pass...😞

Sage Moon shared her first post.

My mother got the Moderna vaccine. She received her second vaccine in February. She now has a severe case of shingles. And she literally cannot move her arm. She has the shingles all over her arm that she got the jab in. 🗨️ Its so hard to see her like this. So much pain and she cant even sleep in same bed as her husband bc her pain level is a 10 and will keep him up all night. 😞 Her dr said the arm pain is from the shingles and its normal. She went against her gut on getting this vaccine and she wishes so badly she wouldnt have gotten it.

Hope Carmickle 🗨️

My sons friend got the first shot I'm not sure which type he got and a week and a half later he had shingles everywhere I'm truly sorry to hear about your mother I will be sending prayers and positive thoughts 🙏🙏🙏🙏

My 72 year old friend has been so isolated & felt so incredibly sad & lonely during lockdown . So brainwashed & in fear about the risk of getting covid that he wouldn't let me visit at all (not even happy to meet outside). He has no family. Of course we talked on the phone but he became so depressed over time that he took it upon himself to cut his wrists. He failed in his attempt to end his life & is being treated in hospital. They gave him the 'vaccine' there and within days he has had a mini stroke & lost the sight in one eye. None of this should have happened IM ANGRY at the government for doing this to all of us. This is NOT OKAY. His story is just one of many thousands. Lockdown has killed and will kill so many as will these jabs. I feel angry and frustrated. My partner and children want the jab. It makes me feel so alone & frustrated when no one is listening or believing. How do we fight this and get the message out there?!!!

* I shared this story (accidentally) within someone else's post earlier so apologies. Re posting here to help get these important accounts out.

Sarah Cox shared her first post.

OK here to Vent cuz all the side effect pages have been pulled and I'm a bit of a lone wolf in my family....

So yesterday my uncle died within a cpl weeks of getting jabbed up, hospital guarantees it wernt the jab and his wife n kids are NHS workers who are clinging to that because they can't handle the alternative....

Everybody knows my views and over the past year I slowly turned into the family lepper!

I only found out he passed because the 1 other family member who sees through the bullshit (but is not as vocal about it) rang me, but apart from that, not a word from any of them....

I dont even know if il get invited to the funeral (although that might be best as I'd spend the entire time biting my tongue bloody)

I have only just realised in the last cpl days since my uncle died, quite how much they have turned us into social pariahs!!! They have polarised people! Even in our own families!

I have all these emotions, grief, sadness, anger, hurt... even guilt!

And I can't express them to anyone, Nobody wants to listen...

I almost wish I didn't know what I know, coz ignorance sure looks bliss right now... and if I had the option to go back and take the blue pill I'm not sure I wouldn't take it!

We had been unable to visit my father in law in almost a year since he was living in assisted living. He did have Alzheimer's and Parkinson's. But as far as we knew, he was fine. He received his first vaccine. Then 2 weeks later ended up in the hospital pretty much unresponsive. Without any answers, he passed away a week later without ever really being conscious.

We believe the vaccine killed him.

Jaclyn Camp 🖐️

Omg I'm in the same exact boat. I'm so sorry for your loss. My dad passed away after getting his second Pfizer vaccine. It was mandated in his facility. My heart hurts and I know there's more to the story but we're not allowed to ask questions. The vaccine killed my dad...

I was introduced to this group yesterday. I am incredibly heart sore for every persons pain and suffering.

My Dad (74),

Dad had high blood pressure and diabetic. With these conditions he was still a strong man with great energy and endurance

I write this with no knowledge of weather or not the vax was a contributor to his passing. There are similar experiences on here so thought I should write Dad's

Towards the end of Jan 2021 he had his first vax. 2 days later he was not feeling well, called the doc who advised he have a covid test which he did, result positive. 2 days later he was taken to hospital by ambulance. 2 days late was put into an Induced Coma on a ventilator as he could barely breath. I received a WhatsApp call from him aided by the nurse as he wanted to tell me where he was gong and that we could see each other and for him to ask that I pray earnestly for him. My brother and I were called to see him in ICU 3 times. The doctors tried to bring him out of the coma sadly the best he could do was open his eyes half way and move his mouth. The doctors did not know why he was not coming out of the coma. They sent Dad for an ICT scan to see if any stroke had occurred, negative. He was then sent in to have a Tracheostomy. A few days later Dad was sent for a cat scan to have a more in depth check for stroke or blood clots, negative. All the while Dad was fading each day, infections were been treated ongoing, his heart started to fail and had to be supported, his bladder started to stop working so now classed as multiple organ failure. My brother and I were called the 4th time to ICU to say goodbye, standing next to his bed whilst all his support was turned off, this was after being in ICU for 30 day's. Dad passed on the 1st March.

Scott Rodgers shared his first post.

I have 2 stories to tell. First my mother received her first Moderna shot the second week of February she was 79 years old. She was not in great health "but" she was not ready to die either. She passed 4 days after the shot in her sleep after not feeling well for several days after receiving the shot. My second story is about a friend and past business partner that was a medical Dr. He was 79 years old and received his first Moderna shot in early April. He died 3 days later of a heart attack. He was healthy and by no means ready to die. My stories are from south western Pa. Something is very wrong with "everything" going on today. God bless all.

Connie Servold Stollery

Connie Servold Stollery mine too. We had talked about it and I'm a pharmacist. He regrets it now that he had the shakes for a month and is still sleeping a lot

Debra Ann

So sorry. I've lost 2 as well. No one to the vrs. Sadly the propoganda machine is strong with this.. now they've "approved" it for 16 yr olds. As I type this I'm listening to the audio book Auschwitz Lullaby and noting the similarities.

Like · Reply · 28m

Jaclyn Camp 🙋

I agree with you 110%! Something is wrong!! My father had Alzheimer's and revived his 2nd Pfizer (was originally told Moderna but now being told it was Pfizer) middle of February. He passed of "heart arrest" and 3+ weeks of severe dehydration, less than 4 weeks later. I know his health was declining over the last year but I don't feel he should of passed yet. I'm in Michigan and our wonderful governor 🤢 opened up nursing facilities the week before he passed, but a covid case in the facility didn't allow us in yet until the week after he passed. I'm so terribly sorry for your losses. It's very hard to deal with!

My dad who's 63 has been in hospital for the best part of 2 weeks after a serious reaction to the Oxford AstraZeneca vaccine, his blood platelets went all the way down to 2 and they still can't get them above 12, its meant to be between 130 and 150, his whole body was covered in massive bruises and swellings and cuts wouldnt stop bleeding due to his blood not clotting, its been a massive scare for all of the family and were still waiting on some sort of improvement and its on his notes that its due to the vaccine!! Hes never been ill a day in his life, has never spend an overnight in hospital since the day he was born, has never been on any medication then gets a jab thats meant to protect him and it makes him ill 😞😞 he's to have a bone marrow biopsy tomorrow and is waiting on his second CT scan, has had so many blood tests that I'm surprised he has any blood left, it has now triggered a condition called ITP that he will probably have and be on medication for for the rest of his life plus he's been told not to have the second vaccine

Dana Day shared her first post.

 · 4h · 

My Ma took the moderna shots to my horror as I had thought we'd agreed she wouldn't and I had shared many reactions to her messenger. I received a call from the hospital that she was in the hospital with congestive heart failure on wed after taking the second shot on Monday. I was fit to be tied thinking she would die. I told her it was a reaction from the shot she said no it wasn't the doctors said if it had been a reaction it would have happened right after the shot. I said MA THIS IS RIGHT AFTER u just had the shot in Monday and this is Wednesday! She went on to have heart stent e Regency surgery and now it's on multiple blood pressure and diarrhetics and statins !!! I left my partner and now living with her full time to care for her and it's best thing I've ever done! Catalyzing event for SURE sooooo ssssssoooooorrrryyyyyy for all your losses I was wailing and shouting when I thought she was going to die..... 🙏😞❤️

Katie Huggins shared her first post.

Had the AZ jab coyodnt get out of bed for 3 days and then developed shingles. Was in antibiotics for 7 days then developed a kidney infection. Another dose of antibiotics for 14 days. Arg

Barry McKay ▸ I had the Astra Zeneca Vaccine and...

1h · 🌐

I received my first AZ shot two days ago, about 6:30PM. I was fine all evening and went to bed at 11PM. At 2:45AM I woke up with uncontrollable tremors, shaking, freezing, and every muscle in my body was incredibly tight. So tight that my head was being forced to the left and it took every fiber of effort to try and straighten it. I had to pee, barely able to walk because of the massive tremors. Sat down on the toilet but couldn't relax enough to go. And when I say tremors and muscle tightening, I mean it was unbelievable. I honestly thought I might not survive the night. Crawled back into bed and lay there for 6 hours until the shaking abated. Frigging unreal. Now, every muscle is exhausted, every joint sore, and finally the headache has ended. Spoke with my family doctor and now I'm going for bloodwork to see if I have underlying health issues like rheumatoid arthritis, etc. No second shot for me.

Adrienne Black ▸ I had the Astra Zeneca Vaccine and...

I had my AstraZeneca vaccine yesterday afternoon. Woke up 3am with a terrible headache temperature and my whole body is hurting and I have no strength 😞😞 I am so weak can't even make a fist 😞 Also my arm is hurting really bad 😞😞 I am not happy 😞 I hope it doesn't last long 🍀😞

Jackie Adams asked a question 🗨️ in **I had the Astra Zeneca Vaccine and...**

7h · 🌐

okay so male 59 had first vaccination about 8th april and had zero side effects - no marks on arm nothing at all - is the kind of guy who gets stung by bugs that make most people react or come out in lumps and he gets nothing - so i would say not a strong immune response. relatively good health normally. so twice since vax he has had pain in tip of shoulder - first time was carrying heavy shoulder bag so that probably pressed on nerves or blood vessels - tonight sitting doing nothing got same type of pain and down left arm like where the needle went and blood pressure just shot up to 145/101 - his is normally very regular at 120/80 and wears a fitbit and doesnt break a sweat walking briskly for 30 mins resting heart rate usually high 80s and has now marginally increased. arm is in quite a lot of pain taking his breath away but thats all under control - took an anadin extra about 10 mins ago so just waiting to see if that makes a difference. does this seem like it could be a delayed response to vaccination? or something else? i am quite medically clued up and could be early signs of peripheral arterial disease but leaving that aside for the moment as more focused on the vaccine reaction. likely or not or similar to any others reactions?

Sinem Ak asked a question  in **I had the Astra Zeneca Vaccine and...** ...

16h · 

Had my AZ vaccine on 25th of March, then got face and top of the head pins and needles, very low blood pressure, and fainted 4 days ago, at the hospital, then injected something I asked what it was, nurse said its to clean the blood. Does anyone know why they did that? And what is it for? I couldnt ask at the time, was quite sleepy. Thanks.

I wrote a post on the previous group that got deleted. Our 80 year old mother was taken to hospital just over 3 weeks ago, her left eye had clouded over and she couldn't see out of it, she was also very run down and fragile We didn't know at this stage that she had been coerced into having the astrazenica jab by the local GP who turned up on 3 occasions at her home while she was alone. This particular GP turned up to administer her 2nd jab but she was in hospital , our Brother happened to be there at the time or we would never have known she'd had it. We informed the hospital we were concerned that loss of her sight could have be caused by having the jab , but it was like tumble weeds going by, and of course NO acknowledgment of her having the jab on her discharge records. She is out of hospital now her sight hasn't returned 😞😞 She can't remember signing anything but we found the card that says she's received it, we are still very angry that she was manipulated in her own home despite saying no twice, also very relieved she us back home . They are never going to admit that this excuse for a vaccinne is causing so many serious problems ..

My sister in law in Houston was admitted to the hospital after her 2nd Pfizer dose with a blood clot in her lung. She is 74 and a cancer survivor for 6 years. The hospital blamed it on the cancer treatment 6 years ago, but when she called the oncologist, he confirmed that it was from the vaccine. She is going to be okay but spent 7 days in the hospital

Troy Steffunick

Massive clot from the second vax is what killed a super healthy friend of the family still in their 40's about a month ago.

Hello... first of all thank you for letting me join...
I received my 2nd Moderna vaccine on 4/3 and by the 6th I started having problems... I thought it was just the small side effects... it got worse and I could not catch my breath... on the 17th I cried myself to sleep.. the next morning I wished I was dead it hurt so bad! Went to the ER and was immediately I was admitted to ICU with lungs full of blood clots... the next morning I had to have a procedure when they put tPA into my lungs to break up the clots... 4 days in ICU, medications... tests.... the doctor who performed the procedure that broke up the clots told me to be sure to report it to the vaccine report website ... he believed the vaccine was the cause... the other doctors say they don't know why all of a sudden I got blood clots... . Now I get to try to recover from this... not fair!!!!

My dentist at the Stockholm Clinic in Puerto Banus, Marbella, a really nice Swedish guy, had always tested negative for covid, but as a frontline worker felt obliged to take the 'vaccine'. Since his 2nd jab, 2 weeks ago, he has been extremely ill. I hope he makes a full recovery and is back doing what he does best very soon!!

This is my dad on 6th January. The day after the jab. You can see him locked behind the glass doors of the carehome he was in. He could see me and he was dancing. I had just found out they gave him the jab the day before on 5 jan. this was totally against his will and ours. My sister and I had legal power of attorney. We told them he was NOT to have it, this was in writing. I called them C?U?N?T?S when they Told me what they did. I pretended to leave the building, my dad went to his room and when the staff walked away I ran I to his room. Chased by staff. They called the police. My dad was fit and well. The next day 7th jan, he went back to bed at 11 am not feeling well. The next day he said nothing was working and stayed in bed. I got him out on 12 th jan and called an ambulance. He had pneumonia and lower chest infection and racing heart. He passed away on 17 jan. I have to forgive the nazi b..... sBut I am taking them to court. I do have a gofund me if anyone would like to help. It's called justice for Richard Baylis. Sorry if this part is now allowed. I will take it off if not. Bless you all. And keep moving forward. My dad is on paradise now. That's my only consolation.

My father-in-law's cousin, who is in her 70s, became obsessive about getting the jab in January. All through January and February she called daily to see if she and her husband could get it. They finally did, with the second dose being March 5th. As far as I know, from what they tell us, she and her husband are in good health overall before all this. They regularly were visiting with a couple select family and going on nature walks and excursions. Her husband did have cataract surgery right after the first jab and the day before the second.

Approximately one month later, her husband started peeing blood. They went in April 12th for a procedure to see why. He was in good spirits, joking with the nurses and requested a picture taken of him before surgery.

It was a long surgery and they determined he had bladder cancer, but oddly it was dozens of small tumors, nothing big and nothing that had spread. Also very odd, he took a long time to come out of anesthesia and remained confused, combative, and unable to eat or drink. They put an IV in to keep his kidneys functioning and a catheter because he kept trying to escape so they had him kept in bed. They had to put mitts on him and medicate him. His behavior was very much like a dementia patient. 3 days ago, the 20th, he had his best day where he was able to drink a little water. Thursday, 4/22, he died.

They received Pfizer and are in FL.

My 81 year old mother had her 2nd Pfizer shot and 8 days later she suddenly started violently vomiting, collapsed and died!

Suspect a pulmonary embolism but an autopsy wasnt done.

Coincidence? I don't think so.

She felt completely fine that morning, went shopping and to lunch. [OBJ]

So had the jab 3 weeks ago - didn't want it felt pressured by my job etc

After few days got out of breath at night - doctor prescribed anti biopics for chest infection - now I'm on steroid inhaler and tomorrow chest X-ray ! I'm wheezing and out of breath at rest and nighttime ! Told my doctor I will not be having a second one - he said he's seen a lot of this after AstraZeneca!

I have posted similar previously on another Facebook covid group but they instantly banned me from commenting ,On the 23rd of February my twin brother George Clegg who was only 55 and healthy without any serious underlying conditions died from a huge blood clot on his lungs ,I completely believe this was caused by the Astrazeneca jab ,it has destroyed me our family and his partner ,no way on this earth a big healthy strong man just died I need to know why they didn't make him aware of the rare side effects as I know for certain he would not have had the jab with clotting as a possible side effect,I loved my twin brother more than my own life and would happily change places with him he was a great man ,and as far as I am concerned they have taken him away from me our family of mum

This is from a good friend in my town

I got the shot in January. By March the dizziness set in.

I had 7 weeks of dizziness. 2 days of total vertigo during that time. The dizziness is almost gone but now my arms feel like I'm holding an electric line. I've had an MRI, been to an ENT doctor, and going back in a week for more tests. I'm not sure it can be detoxed. A girl at the office had the same symptoms and was too young to have them according to the doctor. They weren't wearing masks so I bet money they all had shots.

I couldn't drive for about 3 weeks.

After 7 weeks of dizziness it almost went away. those 2 days of vertigo my eyes were darting back and forth like during REM sleep. They caused me to have dry heaves and I couldn't eat. I waited for days to go to the doctor. He scheduled me for the ENT doctor at Lawton. He found nothing and the audiologist didn't either. It's supposed to be normal for someone over 60 (dizziness). But it is not for some one in her 30s like the girl at the office. The tingling in my arms and left foot started just as the dizziness almost went away. My right elbow hurts almost all the time. It is painful to be on the computer and I have to put my pillow over my arm and lay my head on it to get some relief so I can sleep. The tingling goes away at times but when I extend my arm it kicks in. It sucks big time.

My husband had the Astra Zeneca and had two blood clots 10 days later resulting in a stroke, one in his brain and one in his neck he lost the sight in his right eye and the use of his left hand, 20 days after that he was diagnosed with another 2 blood clots behind each knee we were told he's lucky to still have his legs and if they try and operate it will lead to amputation I'm so scared of him getting more 🙄 he was a perfectly healthy active 50 year old before the vaccine 💔🙄 the doctors had said they believe it was the vaccine as they can't find any other health issues which would have caused it xx

My sister had to go to A@E a few days after having her first jab her lymph nodes swelled up so big, they said she must have already had an infection convenient! She's been unwell on and off and now she has an emergency appointment at optician because of visual disturbances floaters, she is only 49, but is adamant it's not the jab and will have her 2nd one, I've heard other experiences of death after a few days, they are lying to us!!

Christine Meldrum

April 23 at 2:16 AM ·

Thanks for adding me.

We just received a body of a 35 year old woman for an autopsy. The suspected cause of death on the requisition was the J & J jab that she received 7 days prior. She had a brain hemorrhage.

Thank you for adding me.

My Mum was killed by neglect in her nursing home shortly after the jab was rolled out. I was told she had tested positive on a third lft test that day and was invited in to see her. I saw the jab mark on her b arm. I asked for an ambulance to be called as I was led to believe she was dying but her gp cancelled saying her breathing wasn't compromised.

She rallied the next day and I spoke to her on facetime. She said she had had the jab and was violently sick. She said it was everywhere.

I phoned every day and spoke to nurses and caseworkers who said she was taking fluids and urinating but that it had knocked her for six and was sleeping. Her gp was only interested in dnr dnr dnr. I refused to speak to her again.

My phone calls stopped being answered. When I used another number it got answered.

Two weeks later another gp phoned me and asked if I wanted Mum to go to hospital as she had deteriorated. I said she should have gone two weeks ago!

When she arrived the hospital doctor said she was severely dehydrated so the n/h had lied to me.

But the b hospital didn't put her on a drip.

They gave her steroids.

The next day I was called in. They had Mum on morphine and midazolam driver. I was in shock. On the last administering of the morphine Mum's eyes shot open and looked right at me. She held her arms out. I'll never get over it.

I asked for an inquest but got a phone call from a doctor who told me that Mum did have covid19 and he changed her death certificate from pneumonitis to covid

Angelica Ange

This was the start of my brother in law's story. The pic below.. Today, he started to have seizures, once again, after he has had 30 doses of radiotherapy, chemo tablets, and epilepsy meds, they are now saying he has blood clots on his lungs, and they have placed a DNR on him, and the family are being prevented from being with him. They say my brother in law has agreed to the DNR, yet we haven't been able to speak to him, and doubt he knows. 😞

Angelica Ange

he started having seizures, 2 days after having vaccine. They first said it was epilepsy and treated him with epilepsy drugs. He lost speech and can't walk, and they're now saying he has an high grade glicoma, and given him a short time to live. He was healthy, until that vaccine. And they still won't let his wife see him, or any of his family! He continues to have seizures, and has a fluid build up, in his brain.

Wanted to give my story real quick. My dad almost died of a mysterious new blood clot. He had recently had the Pfizer shot. The only reason he is still alive is because he is a cardiologist and knew the symptoms and rushed to the O.R. He could have easily been added to the mourning list. I am worried for my mother and stepfather as they have gotten the shot as well.

I was very reluctant to get the vaccine but after serious consideration, I decided to do it. I got my first (and only one) on April 12th. Exactly 1 week to the day I started getting severe nerve pain on the left side of my face. I felt like someone was jabbing me in the ear with an ice pick. I went to the Dr. a few days later and he diagnosed me with Ramsay Hunt Syndrome which is a rare form of shingles. This opens up a lot of other potential problems down the road. I canceled the 2nd vaccine.

Gina Gray

Margaret Ramsay whatever I have sounds a lot like Ramsay Hunt syndrome and the treatment that he put me on is for Ramsay Hunt and it seems to be working. He wasn't certain but the symptoms fit. Time will tell. I have no visible rash or blisters. It's all internal what ever is going on.

My cousin & his wife got their 1st shots in early March. Soon after, both got very sick with "COVID", his wife to the point of hospitalization. He had pneumonia, & was very sick for a while, but I think is doing somewhat better. She never came home from the hospital, & died about a week ago. A mutual cousin said, "it was such a shock, because she was very healthy." I hadn't heard of either one of them having any health problems before their shot.

Natalie Hartung-Bundy shared her first post. ...

I got my first injection December 27th, peer pressure due to working in a mental health facility. Since January I've developed POTS Postural Orthostatic tachycardia syndrome, my central nervous system is going nuts, I have a weird shocking sensation to my heart, I'm shaking constantly and my beautiful red hair is falling out, my extremities hurt so badly I can't sleep. I got the Moderna.

This is absolutely horrible. Here's the kicker, I was incredibly thirsty at work and walked around for a little bit without my mask, they saw me on camera several days later and they fired me. I wished to God they would have fired me, before shaming me into getting vaccinated!!

My step mum had the 1st pfizer jab early jan then the 2nd about 4 weeks ago.

She is 75yrs old has no underlying health conditions.

She started to not feel right not soon after, by the 2nd jab had symptoms of dementia.

It has now been confirmed that she has glioblastoma grade 4 (most aggressive tumour) She has tumours on both sides of the brain & growing rapidly, there is no treatment other than palliative care & have given her months to live.they believe that they have developed over the last 2-3mths!

I truly believe that this is the vaccine but wondered if there are other reports of this happening after vaccine

When I was invited to join this group, It was because I was always one to speak of the dangers that came with the Covid vax, not because I had a story to share. I would preach these dangers to everyone. Sadly my uncle and Aunt wouldn't listen to me and now I have a story. 😞

My Uncle about a month ago told me he and my aunt were too old and had too many issues to catch covid. I tried hard to explain this to them but it fell on death ears. I saw their Facebook post about their first vax. Then one about 2 or 3 weeks ago about vaccine #2. Then nothing (they live in AZ I'm in OH so it's not like we talk daily) I sort of thought maybe they were feeling sick and that's why no posting. Sadly I was right. My aunt got really sick, She ended up in the hospital. Three days ago My uncle called my mom to tell her my aunt had been put on life-support 3 days before that. Last night we got the call that she passed away. I haven't heard the full story but I know there were blood clots in her lungs. They managed to stay healthy for a year never catching covid they get the vaccine and now my Aunt is gone.

Hello

(I repost my old post with a small update, because the old group has been deleted, sorry for my english it's not very good)

Good morning all

My name is Frédéric, I am 30 years, and I live in Paris, France.

My 75-year- father decided on February 03, 2021 to be vaccinated with Pfizer he died 12 days after a heart attack on February 15, 2021 while he was gardening.

She was a person with no health problems, he had no illness, never sick. He neither smoked nor drank.

The doctors tried to save him for 1 hour, but he didn't come back ...

My mother reported to the doctor that he was vaccinated with Pfizer 12 days ago, the doctor noted on his report.

My mother was surprised that there is no autopsy, she asked the doctor and he said "it's a classic heart attack, it even happens to athletes, there is nothing else to do"

an hour later the funeral pumps came to pick up my father to prepare him for the funeral. 3 days later he was buried.

Many people have told us about a possible connection with this vaccine and with everything that we see on news television.

We decided to hire a lawyer and go to court to file a complaint in order to obtain an autopsy and a real answer.

My lawyer spoke to the press TV and French newspaper to speed things up, it worked because the same day my father's article appeared in the press, my town's prosecutor decided to open an investigation of police ...

Here is where I am today. I'm just looking for answers ...

Why my father, who has always been in good shape, died 12 days after this vaccine? I think I have the right to ask myself questions.

I will keep you informed of the rest of the event.

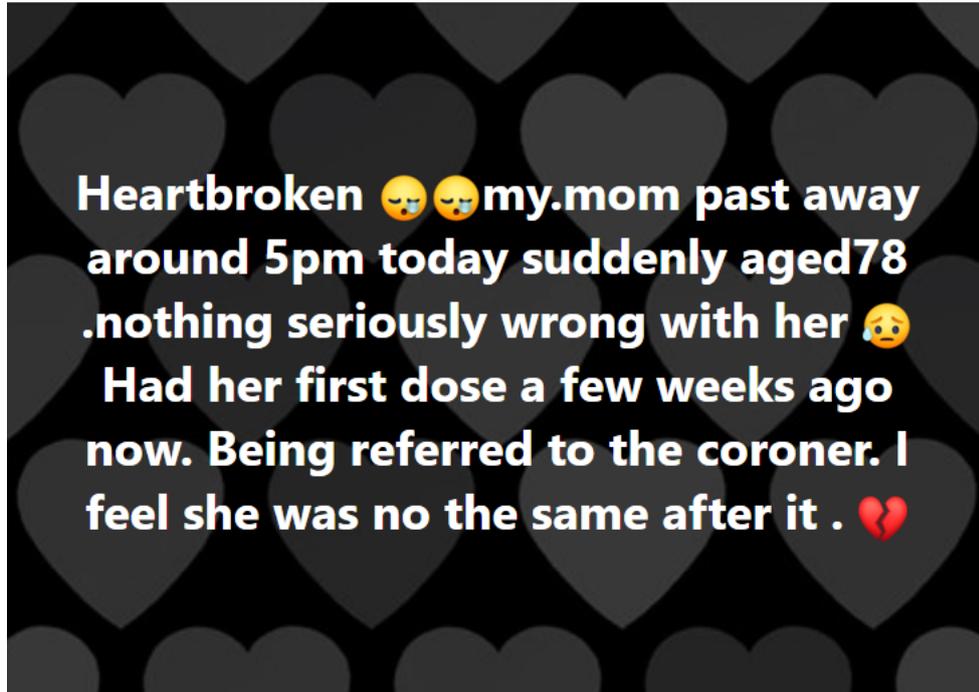

Thank you for listening and I wish you a lot of courage

Dr Stephen Wright died of sinus cerebral venous thrombosis and thrombotic thrombocytopenia on January 26th 2021 aged just 32, leaving behind his wife, Charlotte (my sister in law) and their 2 boys, Izaak 7 and Elijah 1.

Our family and some senior professionals (including thrombosis experts) believe that Stephen could not only be the first in the UK but maybe first in the world, to have died from the Astra Zeneca vaccine.

Stephen was an amazing, funny, smart, kind, warm and loving person. This is evident from the hundreds of people who knew him, even some of those only on virtual platforms.

Stephen was a Dr within the NHS, he worked in CAMHS helping children and families and was due to start at Great Ormond Street Hospital which he would work at alongside CAMHS. His new role was working as a Senior Clinical Psychologist in the Neurodisability Service helping young people with complex Autism. His loss is felt by all in his field.

When alive Stephen joined the organ donation list at least 6 times, and he was able to fulfil his wish giving double lungs to a man in his 30's and an exceptionally rare gift of a heart to a teenage boy.

His wonderful wife Charlotte wanted to share Stephens final journey in the hope of spreading awareness <https://youtu.be/8MpEx43ESZo>

This video has been shared in the hope it will reach families affected by a covid vaccination so that they can come together and form a support group. We do not want to create an anti-vac group but more of a "VAC-Aware" supportive community in the hope that together we can get some answers from the MHRA and help others to be aware of both the positives and negatives of vaccinations 'The Wright Way' ✨

If you are reading this and painfully feel you can relate, please reach out at covid_vac-aware@outlook.com

Danna Spurlock

My daughter was in a store recently when she heard a call for help. She quickly went to see if she could help. A woman was there and her 30 year old daughter was on the floor having a terrible seizure. The daughter had gotten a covid shot a couple days prior to this event. She had never had a seizure before.

Thank you so much for accepting me into this group. I want to start with saying that my heart goes out to those who are going through physical and emotional trauma. I want to let everyone know what our family is going through right now. On Monday April 19th my 18 year old grandson (high school senior) got the first dose of the shot that is being given for the current pandemic. His family is going on a cruise beginning of July. He got the shot in the afternoon by evening he was at work and got a headache. Next day he got the nausea, etc. He got worse each day. By Friday morning he had a fever of over 104 degrees. He got so sick and to keep this post short he got admitted to the hospital on Monday with pneumonia. Yesterday he got transferred to a big city hospital. He is now in pediatric ICU. On oxygen. My previously healthy 18 year old grandson is a very very sick young man. This child never had pneumonia in his life. He was not a sickly child. I just had to write this. We are all so worried and hope that he pulls out of this okay.

Phoenix Harp shared her first post.

39 year old. Super healthy. Never get sick. No underlying conditions. Have never had a vaccine reaction before. Only medication birth control. I get the flu shot every year. Most likely had a asymptomatic covid infection 5 weeks prior to receiving vaccine (was exposed no symptoms) Was told this was not a concern by my doctor. Got first Moderna shot on April 14th. No initial allergic reaction. Went to sleep, 10 hrs after reciving shot woke up with racing heart in a puddle of sweat with muscle aches. Next day was told by my doctor that this was "normal reaction" and that it would subside. Acute phase with fevers, chills and extreme headache for 4 days. Day 5 less fevers, muscles started to seize up and extreme muscle pain happened. Day 6 joint pain and horrible back ache from seized up muscles. Day 8 or 9 I started having involuntary movement and spasms in my hands and feet. Hands and feet curling. Day 10 at around 11 o'clock at night 3 hours from my normal bedtime I had whole body convulsions for around 3 hours. Day 11 and onward it has been horrible back ache seized muscles, leg and arm and hand spasms, sensations of electricity shooting out my feet and hands as they twitch. It has now been 17 days since getting the shot and my symptoms are still going strong. I've been to the Urgent care 2x. Negative covid test. All blood work normal. Everyone just blows me off. I was prescribed a muscle relaxer but nothing else. Dr. can't see me until the 7th and even then no one will let me into a building because I have covid symptoms so they treat me in the car in the covid lines, which is ridiculous because they have my negative test results. I'm pretty miserable. I hope I get better.

Kate Wirt shared her first post.

My mother, a very active 70 year old, had her first shot on Jan 30. The next evening she was rushed by ambulance to the hospital with sky high blood pressure and she was on the verge of a stroke. She's been hospitalized twice since then and they cannot regulate her BP. A family friend had his first jab on the same day and woke up the next morning thinking he had a stroke because he was unable to move. He ended up in ICU after testing positive 3 days later. There seem to be a plethora of issues with Moderna and BP.

Eloise Moore shared her first post.

Just been speaking to my dad who was 80 in December. He is now admitting since the Covid jab his memory has rapidly deteriorated....be interesting to see what increase there was in dementia etc.

Debby Zend shared her first post.

· 15h ·

My dad's cousin 85 had his second jab on Wednesday 28th April, straight away that night he had chills and pains all over his body (this man is a healthy 85 years old) by Friday he was in so much pain 7n his legs and back he went to doctor, she told him it was arthritis and just gave him pain killers....watch this space!
A healthy 85yr old with no arthritic pain goes for jab and then is in so much pain, doesn't sound right to me
His wife is like me is refusing to have it

My mum had the vaccine in March soon after she developed pain in her back and legs to the extent that no painkillers touched the pain. She can hardly walk. The Dr said it was siatita and not side effects from vaccine. She had her 2nd dose 2 weeks then lumps appeared on her neck and her ear turned scabby her hand and arm swelled up. The whole family are worried. She had the pizer.

Ross Taylor shared his first post.

The reason I joined this group is because I have a story too. My granny received her Astrazeneca vaccine at start of January, and 2nd dose at end of January. 3 days after 2nd dose she took unwell with flu like symptoms. She was taken into hospital 13 days later with suspected pneumonia. She was in hospital for 5 days and let out on the Tuesday. I spoke to her on the Thursday night and knew she wasn't any better. She passed on the Monday morning. There's a Scottish whistleblower nurse called Kirsty Miller (she has an interview on pandemic podcast with Dan Astin-Gregory). She worked at Ninewells hospital in Dundee Scotland, and was there round the time my gran was taken in. Her story backs up my belief that the Astrazeneca vaccine killed my granny. Something needs done now. This VACCINES trial needs stopped. We're human beings for gods sake. These evil people should be stopped before they harm anymore of us.

My aunt who has battled breast cancer and more for years received hers at the beginning of the month of April, she said it was the Moderna... her nose hasn't stopped bleeding since. Drs are doing test and said she has severe high blood now and has never had an issue.. I'm praying that she recovers from this.. she has refused to get the second one..

hi everyone, my deepest condolences to anyone grieving a loved one lost as a result of them receiving their dose. My husband received his A Z just over a month ago. Since then I have noticed a slight deterioration in his mental acuity and he tells me he is suddenly having moments of total blankness where he cannot remember a simple thing...like the correct name of an object etc. He is 56. Is this something that is being commonly noticed please? Thank you ❤️
*** Thank you to all you beautiful people that have responded your kindness and concern has been palpable. 🙏 I have told him he should speak to his GP and reported it via the Yellow Card system ❤️

My cousin & his wife got their 1st shots in early March. Soon after, both got very sick with "COVID", his wife to the point of hospitalization. He had pneumonia, & was very sick for a while, but I think is doing somewhat better. She never came home from the hospital, & died about a week ago. A mutual cousin said, "it was such a shock, because she was very healthy." I hadn't heard of either one of them having any health problems before their shot.

My husband had his 2nd vaccine 4 days ago (AZ). Ever since he had it he seems to be extremely agitated. Turns out he's suddenly developed a massive amount of haemorrhoids, they are like a bunch of grapes hanging I'm extremely concerned as my husband is struggling to sit down in comfort and when he goes for a poo he's in agony . Has anyone else experienced this ?

13h · 

My dad, 66, had his second AstraZeneca jab Thursday. He has atrial fibrillation, but it very much controlled by meds (just a low dose of bisoprolol) Anyway, early this morning he started having a thumping heart, and pain at the back of his tongue? Went to a&e this morning and has been told it's his atrial fibrillation. Upped his bisoprolol, but it did nothing. Another dose of bisoprolol, again no effect. They've also put him on a drip of something, I'm assuming to minimise the risk of stroke or thromboembolism? They're keeping him overnight as they just can't seem to lower his heart rate. Seems a bit of a coincidence that this happens less than 48 hours after his jab. Anyone else had issues with afib?

Tracy Cooper

My step dad had to call an ambulance on the way home from second shot of Pfizer. He now has a bb blockage. Several abnormal ecg in the last 3 weeks.

My Brother-in-law and Sister-in-law had their first shots, after first shot Russ was fine, his wife had a few reactions arm sore and red and felt crappy. Within days of second shot, Russ had a massive stroke and is now in hospital paralyzed on left side. My sister in law while at hospital talked to another lady who's husband had exactly the same thing happen to him, he also had a massive stroke. Both ladies are not getting their second shot and feel there is a definite connection to the vaccine. Yes these gentlemen are in their eighties but were healthy before the vaccinations.

Sara Foster shared her first post.

4 members of my family have had the vaccine.

My grandfather 95 years old, fairly healthy has had muscle problems in his neck and shoulder ever since.

My Great aunt also 95 years old was in a care home, caught covid and survived, but had the vaccine and died.

My uncle 67 who is in a care home because of a brain hemorrhage and stroke 17 years ago, had the vaccine without the families knowledge ended in hospital with renal failure and was told to expect the worst. Luckily he has pulled through.

My 82 father, healthy, has had a stroke after his.

Having RA myself i've refused mine, and I pray no more of my friends or family have it.

My thoughts are with you all that have had, or having side effects or lost loved ones x

Fitz Murphy shared her first post.

The father of a man from my church was 95 and very healthy for his age. He was told to get a covid vaccine back in March by his dr despite his health. So he did. He died the next day!!!!!! Granted he was 95 but that's an awfully strange coincidence especially considering he had no existing health issues. The only thing different was that he got vaccinated!!!

A HCA where I work (GP Surgery) has told me that someone she knew has died a few days after getting the jab.

He was young and had no health problems.

Just another "coincidence" of a person dying after getting the jab.

I just can't get my head around why people are getting these rushed jabs (nobody knows their long term effects) for a virus that they have next to zero chance of dying from - the majority of people.

UPDATE ON MY 35 y/o SISTER-
2 weeks after Moderna vaccination:

My sister was discharged from hospital yesterday. 😞 Due to Covid restrictions, she was not allowed any visitors during her whole stay in hospital 😞

She had been on an Acute Stroke Ward since the day after receiving the 1st dose of the Moderna 💉 when she suffered serious stroke-like symptoms.

CTs and MRIs came back clear, so there was no stroke.

She is still suffering with awful head pain and a painful infection on her arm that spread out from the vaccine injection point that now has enveloped her whole upper arm and has spread below the elbow and over part of her shoulder. Weirdly this infection only started a week after the jab!

Her chest pains have gone and her left side numbness and body weakness is improving.

Her facial drooping is almost gone, so we are hopeful she will make a full recovery.

Bloodwork showed her liver function was showing signs of compromise last week, though the markers have now also improved. She is still on antibiotics for the arm infection and has other medications to ease her pains, but can now continue treatment at home.

Having found no other plausible cause for her condition her doctors have confirmed that this nightmare experience was her body's response to the Moderna vaccine. 😞

My sister who was 44 years old, died of a blood clot in her lung about 2 weeks after getting Moderna. She had gone to the ER for problems breathing at one point. They obviously misdiagnosed her. My mom saw her 4 days before she died and she was having a lot of problems breathing, she was swollen and my mom said she could see her heart pounding. She died March 15 and we just got her autopsy results in and she had a pulmonary embolus.

Kirsty Oliveira asked a question  .

April 29 at 9:24 PM · 

My Mum is 83 and has very limited mobility due to terrible arthritis in her knees amongst other issues. Over the last few weeks she has got drastically worse and now has very little strength to move, is in much more pain and shakes when trying to walk sometimes. She had her second jab a few weeks ago and I'm just wondering if this could be related at all. Anyone had anything like this?

Do Va asked a question  in **I had the Astra Zeneca Vaccine and...**

8h · 

Hello everybody. A close friend got severely sick after her astrazeneca shot. It started with a severe headache the day of the jab. Then the next day she started to have chest pain. The day after came important shortness of breath to the point of barely being able to speak. It was hard to receive medical help, her brother in law could helped her as a doctor, thankfully cause no one did a follow up or treated her! She just got a diagnostic of a really rare uncurable lung disease the Sporadic pulmonary lam... Usually it affects young women in ages of pregnancy, but she is in her mis sixties so it is pretty weird. I am heartbroken. Anyone heard, experienced or know people that got lung didease after the shot? Her lungs were perfectly fine and I am afraid that she doesn't have much time left because she suffers a lot.

Leanne Mortimer asked a question  in **I had the Astra Zeneca Vaccine and...**

My aunty had the Astra Zeneca vaccine 4 weeks ago and has had a headache today and slurred speech. She has gone into hospital tonight. Anyone had a similar experience? We are suspecting it's a stroke 😞

Raquel Fogaça asked a question  .

10h · 

Had the 1st jab last monday, on tuesday I was feeling weak, with pain in the arm and headache. "Thats ok", I thought. Then on Wensday i was ok during The day but at night I started feeling my leg uncomfortable, like with some bad blood circulation. Still feeling this way today (on thursday). Should I be worried about the Next days? 🙄

Yesterday at 9:04 AM · 🌐

I came here because I was concerned about the reaction my husband had after his AZ jab. Day 3 and he was struck down by hideous stomach pains and was in bed for 3 days. He is normally healthy, slim, eats well and exercises regularly. He also had a headache. At one point I considered taking him to hospital but he didn't want to make a fuss

He is considering going back for the 2nd which horrified me. I haven't got to the bottom of why yet given he still has protection (around 65%) and it will last around 4 - 5 months. From what I understand the 2nd jab takes it up to 85% and lasts around 7 months. The news said yesterday that booster shots are due in September.

Given that all these vaccines are only licensed for emergency use since they will not be officially approved until 2023, and the FDA has not granted AZ a license for emergency use in the states until all the European data has been analysed, can I ask a very simple question?

I do not mean to be provocative or rude and I am genuinely interested.....why if you have had anything other than a sore arm and fever, and you are now suffering what you think are long term effects from this vaccine, are you considering going back for more?

Thank you

Had my Jab at 11 ish yesterday and was fine until 7pm where I started shivering so bad and was so cold and one of my hands turned white (I have raynauds), 2 hot baths later to try and warm me up and still shivering. I took a sleeping pill wrapped up and got into bed and woke up at 3am burning up 🤒 and had a headache from hell. It's now nearly 8am and my body don't know if it's hot or cold and my neck is hurting and I can't taste my coffee that well 🙄 but apart from that I'm feeling great 🤪🤪🤪

Sarah Beuckmann, from Glasgow, is still urging people to get the jab despite suffering a severe reaction (Picture: Mirror Pix)

A woman's legs erupted into painful blood-filled blisters after receiving the AstraZeneca vaccine.

Sarah Beuckmann, from Glasgow, initially only developed common flu-like symptoms when she had her first dose of the jab on March 18.

But a week later she began to feel a tingling sensation in her legs and noticed a rash

Had my 1st Astra Zeneca on Saturday morning. UK

Felt ok, Sunday-Wednesday I have been exhausted, very weak.

My legs won't stop shaking and feels very strange when I walk, It's like I have been on an escalator. Weird.

Have to get blood test to make sure everything is ok as it's not a common side effect apparently.

Had my first AZ shot on Saturday evening. Was extremely feverish shivering muscle pain headache for first 48 hours. Couldn't get out of bed until the 3rd day. Now I'm feeling better sore arm still but very lightheaded and disoriented. Takes me much longer to do tasks and I don't feel I'm fully engaged. It's the 5th day and impacting by performance at work, getting very vivid dreams each night. It's a very strange feeling. Doctor says I'll be OK in a few more days but I just hope it's not permanent. Lost taste in mouth and just very lethargic.

Blood clots and the vaccine.

My 86yr old mum had this vaccine. That evening she got up to use her commode and struggled to get on and off it. She fell on the floor where she lay for mote than 2 hours before she finally got herself up. Next day she stayed in bed and couldnt eat. For days afterwards she had a numbness in her right leg and it felt cold. She couldnt drive. She hasnt felt right since and says her mind feels different. Shes normally fit as a fiddle. She is too scared to have the 2nd one because the 1st one terrified her. Wishing she hadnt had 1 at all now. O

Karen Barker asked a question  .

May 4 at 12:58 PM · 

Had my 1st dose yesterday and felt very lethargic soon after, woke this morning with swollen tonsils - rare side effect? Coincidental? Anyone else had this experience?

Pauline Jewett shared a link.

May 4 at 11:23 AM · 

Had my Astra Zeneca 2nd jag 2 weeks ago. Last week, I developed severe disabling labyrinthitis.
Then I read this <https://vestibular.org/.../covid-19-vaccine.../paged/26/>
So it seems many people have this as a side effect.
Can I ask if anyone else has had this?
Dizziness, room moving like a rocking boat, nausea, deafness, underwater feeling. Absolutely disabling.
Don't get me wrong...I'd rather this than covid as I've an auto immune problem so I'd likely not survive the actual covid virus, but I'm just hoping it will be gone soon. My GP reckons just to wait it out.
If you have had this, how long did it last?
I care for my elderly Mum and can't drive while I still risk getting this.

Vicky Watson asked a question  .

Have any women had problems with there period mine came 5 days afte jab a week early and is so bad 27 days later it's still going with no signs of stopping

'Dr Stephen Wright died of sinus cerebral venous thrombosis and thrombotic thrombocytopenia on January 26th 2021 aged just 32, leaving behind his wife, Charlotte (my sister in law) and their 2 boys, Izaak 7 and Elijah 1.

Our family and some senior professionals (including thrombosis experts) believe that Stephen could not only be the first in the UK but maybe first in the world, to have died from the Astra Zeneca vaccine.

Stephen was an amazing, funny, smart, kind, warm and loving person. This is evident from the hundreds of people who knew him, even some of those only on virtual platforms.

Stephen was a Dr within the NHS, he worked in CAMHS helping children and families and was due to start at Great Ormond Street Hospital which he would work at alongside CAMHS. His new role was working as a Senior Clinical Psychologist in the Neurodisability Service helping young people with complex Autism. His loss is felt by all in his field.

When alive Stephen joined the organ donation list at least 6 times, and he was able to fulfil his wish giving double lungs to a man in his 30's and an exceptionally rare gift of a heart to a teenage boy.

His wonderful wife Charlotte wanted to share Stephens final journey in the hope of spreading awareness <https://youtu.be/8MpEx43ESZo>
