An investigation of Cases of Death Following COVID Vaccination

Introduction

Data gathered from the VAERS database – reactions following vaccination with COVID vaccines

456 deaths
168 became disabled

Reasons for Deaths Following Vaccines

It is claimed that these deaths were of very old people who were nearing the end of their lifespan anyway, and consequently that their death had nothing to do with the vaccination they received.

If their deaths are completely unrelated to the vaccine then the date of their deaths should be randomly distributed relative to the date of the vaccination. **There should be no clustering of death date around the date of the vaccination.**

People never die without symptoms. Rather, their death is normally preceded by the build-up of fatal symptoms. If their death is completely unrelated to the vaccine, then the onset of their symptoms should also be unrelated to the date of vaccination.

Also, the date of their deaths should be **independent of the batch number of the vaccine**. If, for example, we found that everyone who had vaccines from a certain batch – all died simultaneously, then this would suggest that the cause was something to do with the batch rather than with the people.

Obviously age and prior health are factors that affect mortality, but if the deaths following vaccination were not caused by the vaccine at all, then the date of death and the date of onset of the preceding symptoms should still be random, and not cluster around the date of vaccination.

Distribution of Deaths Following Vaccination

The data for the graph below is found in **APPENDIX B** and is based on **456 occurrences** of death following vaccination with COVID-19 vaccines.

The number of days that death occurs after vaccination is given by -
NUMBER OF DAYS = Date of Death – Date of Vaccination

127 people died within 24 hours

49 people died after 2 days

39 people died after 3 days

29 people died after 4 days

24 people died after 5 days

19 people died after 6 days

16 people died after 7 days

13 people died after 8 days

12 people died after 9 days

This distribution of deaths is **STRONGLY** clustered around the vaccination date, showing that the vaccine was a strong contributing cause to their death. A very high proportion of the death occurs **THE SAME DAY AS THE VACCINATION.**

In fact many died **within 2 hours** of the vaccine being administered – see individual case histories in **APPENDIX A**

An extraordinary characteristic of the Corona Vaccines is the immediacy with which they produce death – frequently within 2 hours of administration of the vaccine. Here are some illustrative medical reports.

VAERS CASE ID : 917117 AGE : 82 GENDER : MALE DATE OF DEATH : 4th JAN 2021

“The resident received is vaccine around 11:00 am and tolerated it without any difficulty or immediate adverse effects. He was at therapy from 12:36 pm until 1:22 pm when he stated he was too tired and could not do anymore. The therapist took him back to his room at that time and he got into bed himself but stated his legs felt heavy. At 1:50 pm the CNA answered his call light and found he had taken himself to the bathroom. She stated that when he went to get back into the bed it was "abnormal" how he was getting into it so she assisted him. At that time he quit breathing and she called a RN into the room immediately. He was found without a pulse, respirations, or blood pressure at 1:54 pm. He was a DNR.”

Time to vaccine effect : 2 hours 54 minutes

Symptoms : Tiredness, legs felt heavy, difficulty with movement, reduced breathing, cardiac arrest

Note : A DNR had been placed on his file. No autopsy was performed

VAERS CASE ID : 917893 AGE : 28 GENDER : MALE DATE OF DEATH : 7th JAN 2021

“Patient was vaccinated at 11am and was found at the facility in his room deceased at approximately 3:00pm. Nurse did not have cause of death”

Time to vaccine effect : Less than 4 hours

Symptoms : None

Note : No autopsy is recorded

VAERS CASE ID : 918072 AGE : 50 GENDER : FEMALE DATE OF DEATH : 8th JAN 2021

“Patient received COVID vaccination around 12:15pm. Patient was monitored for the appropriate amount of time by nursing staff. Patient passed away at 2:15pm.”

Time to vaccine effect : 2 hours

Symptoms : None

Note : No autopsy is recorded

What About the Onset of Symptoms that led to death?

457 people died, but their death was preceded by symptoms. People never die without symptoms, since there must be some organ failure or damage to produce death. When we look at the date of onset of symptoms, we find that there is an even stronger clustering around the date of vaccination

In 194 cases out of 457, the symptoms that led to death began within 24 hours of the vaccination.

It would have been obvious to the victim that their symptoms and illness began simultaneously with the vaccination, and hence the vaccine was responsible.

Cause of Death

The probability of dying drops off steadily with each day after vaccination, suggesting that the body is metabolising the toxin – converting it into excretable forms – most likely by utilising the glycine and acetyl cysteine pathways.

The half-life of the toxin would therefore appear to be about 4 days, since the death rate is halving every 4 days. After 7 half-lives, or 28 days, the toxin has been removed from the body.

Half-life : 4 days

Full Clearance : 28 days

Most of the adverse reactions begin immediately following vaccination, and this is a long time before the body starts to produce antibodies (only after 7 days) – so the adverse reactions are not caused by antibodies produced in response to the vaccine.

Most vaccines produce an inflammation reaction within the first few days, but this does not account for the rapid deaths caused by the Corona vaccines within a few hours of administration.

Also, inflammation reactions to ordinary vaccines are normally localised at the site of injection, whereas the adverse reactions following Corona vaccination occur through-out the body (systemic). This makes sense because you will hardly die from a pain in your arm, but you could die from something that pervaded the whole body.

The purpose of the Corona vaccines is to inject mRNA instructions into the human cells, so that those cells start manufacturing the Spike protein. The Spike protein is supposed to be an inert, harmless part of the whole virus (so it is supposed to give rise only to mild inflammatory reaction localised to the site of injection).

But what if the Spike protein isn't harmless? What if the Spike protein is highly toxic even on its own?

The symptoms of those dying rapidly suggest a systemic (non-local) attack upon the cardio-vascular system. The only possible reason for this, beyond general inflammation, is if the Spike protein itself were very harmful to organs and tissues.

Put in layman's language – immediate death following vaccination indicates the presence of a poison, and the only thing present within 24 hours of vaccination is the Spike protein.

So is the Spike Protein Toxic ?

We know that the Spike binds to ACE2 receptors, and these receptors are found in all the organs normally affected by Covid– heart, brain, kidneys, lungs and liver.

We also know that during a Covid infection, the **THE VIRUS REMAINS IN THE LUNGS**, but the Spike protein on its own is found in all the affected organs outside of the lungs. I should stress that in all fatalities the Spike protein is found in infected organs **WITHOUT** the whole virus being present. So it seems that the Spike protein breaks off from the virus and is responsible for many of the symptoms of Covid.

Several studies have found that the spike protein alone has the capacity to cause widespread injury throughout the body, without any need for the whole virus to be present.

[A study](#) published in December, 2020, in Neurobiology of Disease reported that the SARS-CoV-2 Spike protein showed a direct negative impact on endothelial cells. [Research](#) has found the Spike protein alone to be a potent inductor of endothelial dysfunction.

One of the main adverse effects of Corona Vaccines is nerve damage – and this is most likely caused by the Spike protein on its own. [Researchers](#) studied brain tissues from 13 fatal COVID-19 cases and found the Spike protein (without viral RNA) present in all 13 brains. The whole virus was not present – just the Spike protein. They concluded that the damage caused by COVID in the brain may be induced by the spike protein alone.

Injection of the Spike protein into mice, as part of the same study, led to the mice suffering neurological/nerve damage.

So when people take a Corona vaccine, they are injecting themselves with mRNA that instructs their own cells to start manufacturing the Spike protein – a proven toxin – that goes on to attack heart, blood vessels, brain, kidneys, liver and lungs – where ever there is an ACE2 receptor – wherever there are endothelial cells. The result is a decline in health – sometimes producing death within as little as 2 hours.

So Did They Die of Old Age?

Even though most of those who died were old, they did not die of old age. The clustering of both the onset of symptoms and time of deaths around the date of vaccination is strong evidence that the vaccine and the symptoms it produced led to their deaths.

They may have been weakened by old age, but it was the assault of the vaccine which put them to death.

So Did They Die of a Mutant Variant?

It is curious that outbreaks of deaths in care-homes often coincide with vaccination rollout. However it is claimed that these outbreaks are caused by a new viral strain that is extra infectious.

A new viral strain would have been around before the time of vaccination, and would have persisted to an even greater extent later as infection spread.

However, as we have seen, the timing of the incidences of death and onset of symptoms are strongly determined by the time of vaccination – and show no relationship to any gradual factor building up before hand, or to any continuing or growing factor as viral infection spreads

Excretion Profile of a Poison

Rather, the diminishing effect of the vaccine as days pass looks identical to the excretion profile of a poison – the greatest death occurring at the time of administration of the dose, and decreasing exponentially with a half-life of 4 days as the body metabolises and excretes the toxin.

So the mutant strain hypothesis is simply a lie promoted by governments to help camouflage the effects of a toxic vaccine..

In appendix 1 you can read for yourself the symptoms of everyone who died within 24 hours of the vaccination – a total of 127 people. You may be surprised that the vast majority died of heart attack. The Spike protein seems to have caused diminished breathing and cardiac arrest. I invite you to read carefully through the 18 pages that follow and form your own opinion.

SYMPTOMS OF THOSE WHO DIED WITHIN 24 hours OF VACCINATION		
VAERS ID	Time from Vax to Death	Symptoms
916836	Same day	Syncopal episode. Cardiac arrest.
916890	Same Day	No adverse events
917117	2 hr 50 min	Tired; legs felt heavy; difficulty moving normally; quit breathing
918771	7 hr	Hot flash, nausea, fainting, tired, lethargic, difficulty breathing, diminished breathing ; cardiac arrest
918913	12 hr	No symptoms
920752	13hr	No symptoms
917893	4 hr	No symptoms
918067	2 hr	Fever; shortness of breath; chest pain; heart attack
918068	Same Day	Acute cardiac attack
918072	2 hr	No symptoms
918075	Same Day	Palpitations and syncope
918077	Same Day	Hypoxia, secretions, cough, dyspnea, temperature
918175	Same Day	Difficulty breathing
918184	Same Day	No symptoms
918188	Same Day	No symptoms
918194	Same Day	Syncopal Episode
918197	Same Day	No Symptoms
918200	Same Day	thrombopenia; pulmonary embolism; neutropenia fever;
918201	20 minutes	cold sweats, chest pain, shortness of breath; heart attack
918202	Same Day	Light headed; vitals low
918215	Same Day	No symptoms
918242	8 hr	No symptoms
918243	20 minutes	No signs of anphalaxis
918246	Same Day	Chest pain; irreg heart rhythm
918269	Same Day	Siezure; cardiac arrest
918272	Same Day	Heart attack
918274	Same Day	Unknown
918277	9 hr	Headache
918739	Same Day	Unknown
918750	Same Day	Shaking
918795	2 hr	tired; legs felt heavy; stopped breathing;
918797	Same Day	Unknown
918799	2 hr	Hypoglycemia induced lactic acidosis.
918974	5 hr	Wet cough; course crackles
919087	1 hr 20 min	Seizure
919373	Same Day	Laboured breathing; wet cough with crackles
919444	1 hr 30 min	Unknown
919620	Same Day	SOB
919816	12 hours	Unknown
919827	1 hr 30 min	unknown
919829	Same Day	Diarrhoea
919830	Same Day	circulatory collapse; asystole; cardiac arrest
919831	1 hr 15 min	Seizure; arrested heart
919832	21 days	ITP idiopathic thrombocytopenic purpura bleeding from the head – from the brain
919833	Same day	unknown
919882	12 hr	circulatory collapse; asystole
919883	Same day	acute immune thrombocytopenia
919893	9 hr	Vomit 30 mins after vax ; stroke;
920059	Same Day	shortness of breath and hypoxia, cardiac arrested
920317	7 hr	Unknown
920326		Autoimmune disease (ADE)

In this short list of only 51 cases some common symptoms are readily apparent

- **Cardiac arrest**
- **Syncopal episode**
- **Tired, heavy legs**
- **Diminished breathing**
- **Thrombocytopenia / thrombopenia / autoimmune disease**

Appendix 1 Symptoms of people who died within 24 hours of vaccination

12/31/2020 syncopal episode - arrested - CPR - death

12/30/2020 passed away; This is a spontaneous report from non-contactable consumers received via a Pfizer-sponsored program An 88-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot EL0142) via an unspecified route of administration on 30Dec2020 at a single dose (1 dose) in the left arm (LA) (administered by: senior living) as Covid vaccine. Medical history included patient was 14 plus days post COVID and unresponsive. The patient had no listed allergies. Concomitant medications were not reported. The patient passed away with an hour and half of receiving vaccine on 30Dec2020. Per nursing staff, they did not expect the patient to make it many more days. She was unresponsive in the room when shot was given. It was unknown if an autopsy was performed. No follow-up attempts are possible. No further information is expected.; Reported Cause(s) of Death: passed away

12/30/2020 patient passed away with in 90 minutes of getting vaccine; This is a spontaneous report from three non-contactable consumer reporting on behalf of the patient via a Pfizer sponsored program, Corporate (Pfizer) Social Media Platforms. A 90 (unspecified unit) old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; Solution for injection, lot number: EL0142, unknown expiration), via an unspecified route of administration in right arm (reported as AR) on 30Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. It was reported that the patient was a nursing home patient and received the first dose of COVID vaccine on 30Dec2020. The patient was monitored for 15 minutes after getting shot. Staff reported that the patient was 15 days post COVID. The patient passed away with in 90 minutes of getting vaccine on 30Dec2020. The patient did not require office/ ER visit. An autopsy was not performed. No follow-up attempts are possible. No further information is expected.; Reported Cause(s) of Death: Patient passed away with in 90 minutes of getting vaccine

12/25/2020 hypoxia, secretions,cough, dyspnea Narrative: ALS patient on hospice with ongoing history of aspiration pneumonia, receiving tube feeds. Developed increase in secretions, hypoxemia, temp and with recently noted clogged feeding tube.

12/13/2020 reported causes of death :circulatory collapse; asystole; reported causes of death :circulatory collapse; asystole; This is a spontaneous report from a Pfizer-sponsored program received from the Regulatory Authority-WEB GB-MHRA-WEBCOVID-20201214111558, safety Report unique Identifier GB-MHRA-ADR 24542972 and EU-EC-10007191566 received via Regulatory Authority 908245. A contactable pharmacist and three consumers reported that an adult female patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 13Dec2020 at a single dose for COVID-19 vaccination. The patient's medical history was not reported. Concomitant medications included acetylsalicylic acid, amiloride HCl, allopurinol, desogestrel, furosemide, levothyroxine, sildenafil, and spironolactone. The patient experienced circulatory collapse and asystole on 13Dec2020. The patient died due to asystole and circulatory collapse on 13Dec2020. It was unknown if an autopsy was performed. No follow-up attempts are possible, information about lot/batch number cannot be obtained. No further information is expected.; Sender's Comments: The information available is limited and does not allow a meaningful case evaluation. However, based solely on a close chronological association (same day) a causal relationship between events circulatory collapse and cardiac arrest and BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) cannot be completely excluded. The case will be reevaluated should additional information become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.; Reported Cause(s) of Death: reported causes of death :circulatory collapse; asystole; reported causes of death :circulatory collapse; asystole

01/27/2021 Patient with inoperable pancreatic cancer received second Pfizer vaccine approximately 12:30 pm on 1/27/21. At approximately 16:30, patient complained of abdominal pain and was given Levsin 0.125mg and morphine 5mg orally. At approximately 19:30 patient was found on the floor covered in a large amount of emesis, unresponsive without a pulse.

01/26/2021 (Report per patients wife) Patient took his usual nap around 12pm. She found him lying in the bed unresponsive at 2pm. EMS was not called. Patient's wife called the Funeral home.

01/26/2021 No symptoms appeared immediately after vaccination, although patient passed away around 6:00 pm unexpectedly. Staff talked with her last time at 5:30 pm and then found her at 6:00 pm passed away. Unknown at this time if death is directly related to receiving the vaccine.

01/25/2021 decedent had shortness of breath and hypoxia, cardiac arrested in front of the EMS crew, ACLS initiated, arrived in the Hospital ED asystole and pronounced dead

01/25/2021 CARDIAC ARREST THAT LEAD TO DEATH - IT WAS REPORTED BY EMS THAT THE PT HAD RECEIVED THE VACCINE ABOUT 30 MINS PRIOR. HE ARRIVED HOME, BECAME SHORT OF BREATH & COLLAPSED. 911 WAS CALLED AND HE WAS TRANSPORTED VIA EMS TO HOSPITAL (16:17) WHERE HE LATER EXPIRED (23:01).

01/22/2021 At 04:30 on 1/22/2021, facility was notified of employee death at home.

01/21/2021 Patient had increased SOB while at home. EMS was called. Patient coded in the squad

01/21/2021 Patient was brought to the ED from facility which he received the vaccine via ambulance with BiPAP, hypoxia, and one dose of Epi of 0.3 mg. He then required intubation, and had struggled with hypoxia, even on increasing PEEP. CODE BLUE called in the ED for PEA. He was medicated for such (please see the code run sheet for details), and he came in and out of the code 5 times. After 95 minutes, with the wife at the bedside, and family conference by phone, the code was called, and he was pronounced at 18:20. He received in total 8 mg of Epi, 3 shots of Atropine, 3 amps bicarb. He got lasix 40 mg, lovenox 60 mg subcutaneous once. He had a CVC into the right internal jugular, and levophed was started, then Epinephrine drip was started. Prior to the code he got steroids (solumedrol 125 mg, then later decadron 6 mg iv), benadryl iv, antibiotics (ceftriaxone / zithromax), and lasix 40 mg. All this time while in the ED, the Rt was at the bedside, and lots of secretions from the lungs were aspirated, bloody color. Code was the result of PEA secondary to hypoxia (<= 85%), despite being on the vent, with PEEP 12, FiO2 of 100%, with acidosis. After 95 minutes of active resuscitation, the patient was found not responsive to painful stimuli. There was no palpable pulse. No spontaneous respirations. No heart or breath sounds by auscultation. Absence of pupillary light reflex.

01/21/2021 Vomit 30 minutes after administration. approx. 9 hours later, resident has Stroke-like symptoms. He was previously on Hospice before admitting to our facility and planned to be readmitted to hospice upon discharge.

01/20/2021 Patient's wife called this morning stating that her husband has passed away last night. After receiving first dose of Pfizer COVID-19 vaccine at around 0830, patient remained in the Immunizations

Department for the 15-minute monitoring period. Per wife, patient's only complaint was pain at the injection site. At 1300, wife states that patient complaint of dizziness which "dissipated after a few minutes" followed by a headache which "dissipated after a few minutes" as well. Then patient complained of nausea, no vomiting and "couldn't relax." Per wife, from around 1400/1500, patient stayed on his recliner while still having a conversation with her--"he didn't get up to eat." Last conversation they had was around 2000/2100. Per wife, at around 2100/2200, patient was quiet and when she checked on him, "he wasn't responding anymore." Wife then called 911, "but they couldn't revive him."

01/20/2021 Pt received second dose of COVID vaccine on 01/20/2021 at 1430. At 1600 Pt developed a wet productive cough with coarse crackles. Pt ate dinner at 5 pm cough persisted. At 18:30 the nurse went to Pt's room to give him his medications. Pt still had a cough, denied shortness of breath. Pt was in a good mood and joking with staff. Pt asked to be shaved. At 19:45 Pt was sitting in the lounge and a CNA noticed that Pt was pale/white in color and clammy. O2 Sat was 85%. Respirations were labored. Pt was placed on 4 L of O2. Increased to 5 L via face mask and O2 sat was 89-90%. Ambulance was called at unknown time. Pt arrived at Medical Center at 2120 and was pronounced dead at 2127

01/20/2021 Patient began with a wet productive cough with crackles heard at 4 pm, at 5pm he went to dinner and still had cough, at 630 was administered his medications and he had cough, no shortness of breath and was in a good mood. By 7:45pm CNA found him in the lounge with labored breathing, O2 was at 85%. They gave him 4 liters O2, then a facemask at 5 liters which brought his O2 into the 90's. At that time called ambulance, patient arrived to ER around 9:20pm and passed away shortly after. Cardiac Arrest

01/20/2021 Unspecified event/he passed away; Dizziness; Nausea; Headache; This is a spontaneous report from a contactable consumer (patient's wife). An 80-year-old male patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (Lot number EL3302), intramuscular at single dose in the left arm on 20Jan2021 08:15AM for Covid-19 immunisation. Medical history included atrial fibrillation (Diagnosed about 10 years ago). Concomitant medications included unspecified drug for atrial fibrillation. On 20Jan2021, the patient experienced dizziness, nausea, headache with outcome of unknown and unspecified event/he passed away. The patient died on 20Jan2021. An autopsy was not performed. The events were described as follows: "Her husband received the first dose of the vaccine yesterday morning and he passed away last night. She is not sure what time he died last night. States he was so eager to get the vaccine. Reports he was exhibiting symptoms that were listed as possible side effects. He was experiencing dizziness, nausea, and a headache that started several hours after the vaccine, the side effects started in the early afternoon. She does not know the cause of death and does not think an autopsy was performed". The vaccine was administered at Hospital Facility. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine.; Reported Cause(s) of Death: Unspecified event/he passed away

01/19/2021 Shaking and then became unresponsive

01/19/2021 Possible seizure, unknown at this time, approx 1hr and 20min after vac given. Passed away approx 2hrs after vac.

01/19/2021 My mother died 12 hours after the vaccine was administered

01/19/2021 Reportedly, this employee's mother died the night of the vaccine. The details are not known at this time.

01/18/2021 Resident was noted unresponsive, no respiration, no blood pressure, no pulse, code blue called according to facility protocol, resident is full code, CPR started, 911 called, arrived and took over from staff. Resident was pronounced dead at 1:16pm 1/18/21

01/18/2021 At approximately 930am I arrived at Memory Care. I met with the director of the facility and she directed me to where my team would be setting up. My team consisted of (technician), (nurse) and I. As we were setting up, the director asked how she can help. I explained to her that we would need a designated area for patients to be monitored after vaccination for 15 minutes and maybe even longer. I also explained that we would need one of her staff monitoring while we vaccinate. She agreed, and proceeded to designate her staff and the cafeteria area, facing the vaccination station, the monitoring station. Throughout the day, nurse and I were both vaccinating, while the staff of the facility would monitor the vaccinated patients. I would also stop occasionally to mix the vaccine and check the temperature of the aero safe. At approximately 12:50pm, the director rushed in and stated that a patient is not responding, and that she had been vaccinated. At that point, I grabbed epipens and a thermometer and I also instructed nurse to grab an Epipen and come with me. We followed the director to pt's room. Once we got to the room, the patient was in bed and there were 4 staff members standing bedside and one of them turned and stated the patient has passed. At that point I asked the staff how long ago did the patient get the vaccine, they stated about 30 minutes ago. They also stated that the patient was a hospice patient and that the patient had declined, and was rapidly deteriorating and had not eaten or drank anything all day. They also stated that the patient had been monitored for 15 minutes post vaccination. I then left the room and grabbed the patients COVID Vaccine intake consent form. I looked at the answered questionnaire and all the responses were circled NO. Patient had a temp of 96.5 at the time of vaccination. The vaccine administration information for Immunizer Section was filled out by Nurse. I then proceeded to ask the director once again if there were staff that was monitoring her for 15 minutes, the director stated they had staff monitoring her. She also stated the Hospice nurse has to announce her death, so they waited for the Hospice Nurse to come. I then called Corporate and explained the situation. After speaking to corporate, I also asked nurse, if she remembered the patient. She stated that she did and at the time of the vaccination the patient was not alert, there were two staff members with the patient. She was non oriented and she kept closing her eyes. At that point, Nurse stated that she asked the two staff members with her if this is how she usually is and if its ok to vaccinate her. Both Staff members stated that it its ok, this is how she is. The Nurse then proceeded to vaccinate. At approximately 3:10pm, as I was leaving I spoke to the director, and one of her Staff members. Staff that the patient has actually not eaten/ or drank anything for the past several days, including today(01/18/21). Staff also stated that on Friday, Jan 15th, 2021, they had informed the family that the patient was rapidly deteriorating. Staff also stated that the family knowingly gave the consent to vaccinate her. She also stated that the hospice Nurse believes that the death was primarily caused by her deteriorating state. She also stated that the hospice Nurse informed that the death was not due to the Vaccine. Per Lead Pharmacist at the clinic.

01/15/2021 Patient suffered a cardiac arrest and was unable to give details about her symptoms. Per husband, patient did not complain of any symptoms after vaccine administration. She began seizing without warning which was complicated by cardiac arrest of uncertain etiology

01/15/2021 Pt had witnessed arrest by wife. Pt wife started CPR and called EMS. CPR started at 15:12. Continued by EMS. Pt arrived to medical center asystole with CRP in progress and ventilated via igel device. He was in refractory ventricular fibrillation and continued CPR for a total of 1 hour. At that point, we checked a bedside ultrasound which showed his heart at a standstill. He was unresponsive to verbal and tactile stimulus and had fixed unreactive pupils. He was pronounced at 16:13.

01/15/2021 arrested/heart was at a standstill; brief seizure; Last blood glucose was 167; feeling poorly; This is a spontaneous report from a contactable pharmacist. A 66-year-old male patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot number: EL1283), intramuscularly in the left arm, on 15Jan2021 at 14:00 (at the age of 66-years-old) at a single dose for COVID-19 immunization.

Medical history included congestive heart failure presented with unresponsiveness, coronary artery disease, dyslipidemia, hypertension, non-ongoing stroke (no residuals) in 2001, thyroid disorder, walnuts allergies, stenting to left anterior descending artery (LAD) and right coronary artery (RCA), wheezing, chest pain, and erectile dysfunction. Prior to the vaccination, the patient was not diagnosed with COVID-19. Concomitant medication, taken within two weeks of vaccination, included salbutamol (PROVENTIL) taken for wheezing, salbutamol (VENTOLIN) taken for wheezing, acetylsalicylic acid (ASPIRIN 81), colecalciferol (reported as Vitamin D3; MANUFACTURER UNKNOWN), furosemide (LASIX) taken for weight gain, glyceryl trinitrate (reported as: nitroglycerin; NITROSTAT) taken for chest pain, hydrochlorothiazide (HYDRODIURIL), levothyroxine sodium (SYNTHROID), levothyroxine sodium (LEVOTHROID), metoprolol succinate (TOPROL XL), montelukast sodium (SINGULAIR), prasugrel hydrochloride (EFFIENT), rosuvastatin calcium (CRESTOR), sildenafil (VIAGRA) taken for erectile dysfunction, spironolactone (ALDACTONE), and testosterone (ANDROGEL). It was unknown if patient received other vaccines within four weeks of vaccination. The patient experienced feeling poorly on 15Jan2021 at 14:50 and patient arrested/heart was at a standstill, brief seizure, and last blood glucose was 167 on 15Jan2021 at 15:15. The patient expired on 15Jan2021 at 15:15. The clinical course was reported as follows: The patient received the vaccine on 15Jan2021 around 14:00 and started feeling poorly around 14:50. The patient arrested after a brief seizure. Cardiopulmonary resuscitation (CPR) was initiated by his wife. Emergency medical service (EMS) arrived around 15:21 and initiated advanced cardiovascular life support (ACLS). CPR was continued upon arrival. A bedside ultrasound was performed and revealed his heart was at a standstill on 15Jan2021 and last blood glucose was 167 on 15Jan2021. Therapeutic measures were taken as a result of the events as aforementioned. The clinical outcome of expired and arrested/heart was at a standstill was fatal and of feeling poorly, brief seizure, and last blood glucose was 167 was not recovered. The patient died on 15Jan2021. The cause of death was assessed as arrested/heart was at a standstill. It was not reported if an autopsy was performed. It was also reported that since the vaccination, the patient had not been tested for COVID-19.; Sender's Comments: The 66-year-old male patient had medical history included congestive heart failure presented with unresponsiveness, coronary artery disease, dyslipidemia, hypertension, stroke, thyroid disorder, stenting to left anterior descending artery (LAD) and right coronary artery (RCA), wheezing, chest pain. The reported fatal event cardiac arrest was most likely due to concurrent cardiac diseases, and unlikely causally related to the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE). The case will be reassessed should additional information become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.; Reported Cause(s) of Death: arrested/heart was at a standstill

01/14/2021 Patient had no immediate effects from the vaccine, but died approximately 8 hours after receiving first dose of vaccine.

01/14/2021 Headache after dose was given at 10:00 a.m Died at after 7:30 pm the same night the dose was given.

01/14/2021 Admitted 1/14/21: Patient is an elderly 93-year-old female with multiple medical problems including chronic combined CHF, P 80, diabetes mellitus, HTN, hyperlipidemia, CKD stage 3, has been complaining of generalized weakness, fatigue, decreased appetite for the past few days. She had an outpatient COVID-19 vaccine earlier today. Within 2 hr of admitting the patient to the hospital, condition clinically deteriorated. Patient elected to be DNR/DNI while in the ED. Patient was pronounced dead at 10:30 p.m. earlier today. Preliminary cause of death: Hypoglycemia induced lactic acidosis.

01/13/2021 little bit of a reaction light headed after 5 minutes. vitals were low, so observed for 30 minutes after being light headed. Patient was found unresponsive and pronounced dead later that day.

01/13/2021 Pt collapsed at home approx 5:30 pm and died

01/13/2021 Pt passed away evening of 1/13 - unknown reason currently Narrative:

01/12/2021 Patient received her vaccination on 1/12/21 administered by pharmacy*+. She expired on 1/12/21 an approximately 7:30pm. Resident did not have any adverse reactions and was a hospice patient.

01/11/2021 Resident was found deceased at approximately 6pm in her apartment

01/11/2021 Three hours after receiving COVID 19 vaccination, Patient oxygen level decreased to a critical level and went into cardiac arrest. Staff performed full code but was unable to bring back patient from cardiac arrest.

01/11/2021 Cardiac Arrest; Patient was found pulseless and breathless 20 minutes following the vaccine administration.; Patient was found pulseless and breathless 20 minutes following the vaccine administration.; This is a spontaneous report from a contactable other healthcare professional (HCP). A 66-year-old female patient (pregnant at the time of vaccination: no) received the second dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EL1284) via intramuscular at left arm on 11Jan2021 12:15 PM at single dose for COVID-19 immunization. Medical history included diastolic CHF, spinal stenosis, morbid obesity, epilepsy, pulmonary hypertension and COVID-19 (Prior to vaccination, the patient was diagnosed with COVID-19). The patient received medication within 2 weeks of vaccination included amiodarone, melatonin, venlafaxine hydrochloride (EFFEXOR), ibuprofen, aripiprazole (ABILIFY), lisinopril, cranberry capsules, diltiazem, paracetamol (TYLENOL), famotidine, furosemide (LASIX [FUROSEMIDE]), ipratropium bromide, salbutamol sulfate (IPRATROPIUM/ALBUTEROL), buspirone, senna alexandrina leaf (SENNA [SENNA ALEXANDRINA LEAF]), polyethylene glycol 3350 and morphine. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Patient used took Penicillin, propranolol, quetiapine, topiramate, Lamictal and had allergy to them. Patient used took the first dose of BNT162B2 (lot number: EJ1685) via intramuscular at right arm on 21Dec2020 12:00 PM at single dose for COVID-19 immunization. Since the vaccination, the patient been tested for COVID-19 (Sars-cov-2 PCR) via nasal swab on 06Jan2021, covid test result was negative. Patient was found pulseless and breathless 20 minutes following the vaccine administration (11Jan2021 12:30 AM). MD found no signs of anaphylaxis. Patient died on 11Jan2021 12:30 AM because of cardiac arrest. No treatment received for the events. Outcome of pulseless and breathless was unknown. the autopsy was performed, and autopsy remarks was unknown. Autopsy-determined cause of death was unknown. It was reported as non-serious, not results in death, Life threatening, caused/prolonged hospitalization, disabling/Incapacitating nor congenital anomaly/birth defect.; Sender's Comments: Based on the available information this patient had multiple underlying medical conditions including morbid obesity, diastolic CHF, epilepsy, pulmonary hypertension and COVID-19 diagnosed prior to vaccination. All these conditions more likely contributed to patients cardiac arrest resulting in death. However, based on a close temporal association ("Patient was found pulseless and breathless 20 minutes following the second dose of BNT162B2 vaccine administration, contributory role of BNT162B2 vaccine to the onset of reported events cannot be completely excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.; Reported Cause(s) of Death: Cardiac arrest; Autopsy-determined Cause(s) of Death: autopsy remarks was unknown. Autopsy-determined cause of death was unknown

01/11/2021 Resident was found without a pulse and not breathing 20 minutes after vaccine administration. Upon MD review, no signs of anaphylaxis were noted.

01/08/2021 Medical docter state patient has a acute cardiac attack

01/08/2021 Patient received COVID vaccination around 12:15pm. Patient was monitored for the appropriate amount of time by nursing staff. Patient passed away at 2:15pm.

01/07/2021 Patient was vaccinated at 11am and was found at the facility in his room deceased at approximately 3:00pm. Nurse did not have cause of death

01/05/2021 Patient did not display any obvious signs or symptoms; the vaccination was administered at approximately 10:00 AM and the patient continued throughout her day without any complaints or signs of adverse reaction. Patient was helped to bed by the nursing assistant estimated at around 9:00 PM. The facility received notification from the lab around 11:00 PM that the patient's COVID-19 specimen collection from Sunday, 1/3/21, detected COVID-19. When the nursing staff went to the room to check on the resident and prepare her to move to a COVID-19 care area the patient was found unresponsive, no movement, no chest rises, noted regurgitated small amount of food to mouth left side, lying on left side. Pupils non reactive.

01/05/2021 Fever, shortness of breath and chest pain that resulted in a heart attack a few hours after vaccination

01/05/2021 Narrative: Symptoms: Palpitations & Syncope Treatment: EPINEPHRINE 1 MG ONCE ,EPINEPHRINE 1 MG ONCE ,SODIUM BICARBONATE 50 ML ONCE

01/05/2021 Difficulty breathing, death.

01/05/2021 Heart attack; This is a spontaneous report from a contactable consumer. An 82-year-old female patient received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot Number: and Expiration Date: Unknown), via an unspecified route of administration in the left arm on 05Jan2021 at 13:00 at a single dose for COVID-19 immunization; administered in doctor's office/urgent care. The patient's medical history and concomitant medications were not reported. It was unknown if the patient received any other vaccines within four weeks prior to the COVID vaccine. Prior to the vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. On 05Jan2021, the patient experienced heart attack; which resulted in death and was assessed as medically significant. The patient also experienced the associated symptoms of cold sweats, chest pain, shortness of breath. Therapeutic measures were taken as a result of heart attack, which included "life saving measures" by the paramedics performed upon arrival with no success. The clinical outcome of the event, heart attack, was fatal. The patient died on 05Jan2021 due to heart attack; as ruled by the paramedics. It was unknown if an autopsy was performed. The batch/lot numbers for the vaccine, PFIZER-BIONTECH COVID-19 MRNA VACCINE, were not provided and will be requested during follow up.; Reported Cause(s) of Death: Heart attack

01/05/2021 "We held our COVID 19 vaccination clinic in our facility on 1/5/2021 with partnership of a pharmacy. One of our housekeeping staff (63 year old male) who had confirmed to be vaccinated, came to the facility and was vaccinated by the pharmacist with Pfizer vaccine. The pharmacist explained the facts of vaccine and the employee signed the consent form for the vaccine. He was monitored in our observation area under the supervision of an RN post vaccination for 15 minutes. He did not complain of any side effects and did

not appear to be in any distress. Per daughter, employee went to his pharmacy in the evening some time after leaving the facility. Daughter reported that he called his wife from the pharmacy and asked his wife to come and pick him up as he did not feel well. His wife went to the pharmacy and found him in the parking lot where he gave her his medical card and asked her to get his medication from the pharmacy. His wife went to pick up the medication and upon her return, found him in the car in the passenger seat. The daughter reported that he took the medicine that the wife brought from the pharmacy while in the car. His wife drove him home and upon reaching home when she tried to get him out, he was unresponsive. His wife called her children to help her and there was no response. Family called the paramedics and he was pronounced dead. I have informed pharmacy and they are reporting to FDA per their protocol. PHD has been notified as well and they are doing their reporting per their procedure. Daughter reported that employee had a history of heart disease and diabetes and had a pace maker."

01/04/2021 The resident received is vaccine around 11:00 am and tolerated it without any difficulty or immediate adverse effects. He was at therapy from 12:36 pm until 1:22 pm when he stated he was too tired and could not do anymore. The therapist took him back to his room at that time and he got into bed himself but stated his legs felt heavy. At 1:50 pm the CNA answered his call light and found he had taken himself to the bathroom. She stated that when he went to get back into the bed it was "abnormal" how he was getting into it so she assisted him. At that time he quit breathing and she called a RN into the room immediately. He was found without a pulse, respirations, or blood pressure at 1:54 pm. He was a DNR.

01/04/2021 Vaccine received at about 0900 on 01/04/2021 at her place of work, Medical Center, where she was employed as a housekeeper. About one hour after receiving the vaccine she experienced a hot flash, nausea, and feeling like she was going to pass out after she had bent down. Later at about 1500 hours she appeared tired and lethargic, then a short time later, at about 1600 hours, upon arrival to a friends home she complained of feeling hot and having difficulty breathing. She then collapsed, then when medics arrived, she was still breathing slowly then went into cardiac arrest and was unable to be revived.

01/04/2021 tired; legs felt heavy; stopped breathing; This is a spontaneous report from a Pfizer-sponsored program a non-contactable consumer. A 93-year-old male patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 04Jan2021 11:00 at single dose for covid-19 immunisation. The patient medical history and concomitant medications were not reported. Patient received vaccine around 11:00 a.m. About two hours later, he said he was tired and couldn't continue with the physical therapy he was doing. He was taken back to his room, where he said his legs felt heavy. Soon after, he stopped breathing. A nurse declared a do-not-resuscitate order. The patient died on 04Jan2021. It was not reported if an autopsy was performed. Outcome of stopped breathing was fatal. Outcome of tired and legs felt heavy was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained.; Reported Cause(s) of Death: stopped breathing

01/04/2021 Patient expired - autopsy preformed - cause of death not related to COVID-19 vaccination according to coroner.

01/03/2021 Resident exhibited no adverse events during 30 minute monitoring following vaccine administration. Resident found without pulse at 1900.

01/02/2021 The resident was found deceased a little less than 12 hours following COVID vaccination, and he had had some changes over the last 2 days. He was 96 and had been on hospice care for a little while. Noone noticed any side effects from vaccine after it was given

Reported causes of death: Diarrhoea; This is a spontaneous report from a contactable healthcare professional via agency and a non-contactable consumer via a Pfizer-sponsored program Corporate (Pfizer) Social Media Platforms. An elderly patient of an unspecified age (also reported as were in their early to mid-60's) and gender received BNT162B2 (Pfizer-BIONTECH Covid-19 Vaccine), via an unspecified route of administration on 10Dec2020 at a single dose for COVID-19 immunisation. Medical history included pseudomembranous colitis (broad), gastrointestinal nonspecific symptoms and therapeutic procedures (narrow), and noninfectious diarrhoea (narrow) . The patient's concomitant medications were not reported. The patient experienced diarrhoea on an unspecified date in 2020. It was reported that most of the deaths after the COVID-19 vaccine occurred within 24-48 hours after the shot. The write-ups that accompanied the reports furnished details about these sad fatalities, including the astonishing fact that some of the deceased had actually experienced and recovered from COVID-19 (raising questions about why they were vaccinated). It was also reported that the event was not life-threatening, did not result to a birth defect or permanent disability, did not require any office/ER/doctor visit, and did not require any hospitalization. The patient died on 10Dec2020. It was not reported if an autopsy was performed. The reported cause of death: diarrhoea. No follow up attempts are possible, information about the lot/batch number cannot be obtained.; Sender's Comments: Based on the available information the event diarrhea resulting in death is attributed to patients preexisting medical conditions including pseudomembranous colitis, gastrointestinal nonspecific symptoms and therapeutic procedures, and noninfectious diarrhea. However, based on a close chronological association (same day) contributory role of BNT162B2 (Pfizer-BIONTECH Covid-19 Vaccine) to event exacerbation cannot be completely excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.; Reported Cause(s) of Death: Reported causes of death: Diarrhoea

01/21/2021 per recipient spouse - vaccine recipient became ill during the night of 1/21/21 or early morning of 1/22/21 and was deceased in the morning of 1/22/21.

01/20/2021 This is a 94-year-old male who is brought in by ambulance after being found on the floor with unknown downtime. He was in asystole upon EMS arrival. He remains in asystole. No advanced airway is in place. The patient is getting compressions from Lucas device upon arrival. It was reported that he was last talked to by family at 2 PM. The patient got his SARS-CoV-2 vaccination this morning. The patient is evaluated emergently. CPR was ongoing with 3 rounds of epinephrine given. The patient remains in asystole. He has rigor mortis. The patient's pupils are fixed and dilated. The patient has compressions paused and ultrasound is used to evaluate for cardiac activity. None is detected. The patient has no electrical activity on monitor. The patient's time of death is 2113.

01/20/2021 At approximately 12:15 pm the resident had a brief unresponsive episode that resolved quickly. Her Vital signs were stable and her mentation was at baseline. Later that evening approximately 10 pm she had labored respirations, shortness of breath, lethargy with bilateral crackles, Oxygen desaturated to 76% on room air, tachycardia and hypotension. She expired at 6:30 a.m. the following day.

01/20/2021 Patient has a history of advanced melanoma with brain metastasis. He developed seizure disorder as well and had some mild seizures at home over the prior month. He received the vaccine at 4pm and was monitored in the office for 15 minutes. He then went home with his daughter whom he lives with. He ate dinner with her and read until 8pm when he went to his room. She found him in his room at 9pm unresponsive with seizures. Hospice was alerted and recommend oral valium. He continued to be unresponsive and expired the following day at 7:30 pm.

01/19/2021 Resident returned to the memory support unit at 1500. Resident was then toileted and transferred in to bed per his request. At 1515 resident was observed face down beside bed, resident sustained a laceration on the forehead. Neuro Checks within normal limits Vital signs: 100/52, 100, 97.2, 28. Resident sent to ED for further medical evaluation via EMS.

01/19/2021 Patient died.

01/18/2021 Patient received COVID 19 vaccine the morning of 1/18/21 at Public Health COVID-19 vaccine clinic. I (person completing this report) work for PH. Later that night while in bed, patient reported difficulty breathing to his wife, then turned blue, and became unresponsive. Family report pt was without any symptoms prior to event. 911 called; CPR started by family member 15 min. after pt became unresponsive. EMS performed resuscitation for about 30-40 minutes with multiple defibrillation for V-fib. Between EMS and Medical Center ER, pt had 9 rounds of epi, CPR w/ LUCAS machine, given 2 doses of amiodarone (150 mg and 300 mg). Patient had 3 EKGs, which did not show STEMI, but did show nonspecific conduction delay and sinus arrest with junctional escape vs sinus bradycardia (HR 50's). Pt had return of spontaneous circulation. Pt intubated, and started on Levophed. Pt transferred to ICU, and had central line placed. Family decided to make patient DNR. Pt went into coarse VFib again, and as per wishes of family, code blue not called. Patient expired at 01:53 on 1/19/21.

01/15/2021 On 1/15/2021 at 1800, resident noted to be lethargic and shaking, stating "I don't care." repeatedly. C/O head and neck pain. T100.6. Given Tylenol with no relief of pain. Order received for Aleve and administered.. Assisted to bed as usual in evening. Monitored during night shift and noted to be resting comfortably/sleeping.. Noted agonal breathing at 4:10 AM 1/16/2021 , T 99.4, Absence of vital signs at 4:15AM 1/16/21 and death pronounced at 4:40AM 1/16/21.

01/14/2021 At approximately 10:30pm on 1/14/2021, resident was noted to have a rash on her face, hands, arms, and chest. VS:100.2, 113, 20,108/59, 84% room air. applied nasal cannula at 4-L, telephoned Physician orders 6mg Decadron one time order, a second set of Vitals , reads 99.3, 110, 20, 106/60, 90% on 4-L N/C. On coming shift advised. At approximately 2:00am on 1/15/2021, resident congested and coughing. BP 151/70, pulse 124, temp 98.1 forehead, resp 20 and pulse ox 79% on 3L. At approximately 2:30am PRN cough syrup and breathing tx. Resident's condition began to worsen with breathing tx. This LPN updated at 0248 doctor on resident's condition. Doctor gave permission for resident to go to hospital. At 4:19am the ER called to say resident passed away.

01/12/2021 Initial pain in back of head and extreme headache. Some vomiting. At emergency, went into coma and was intubated. Hole drilled in skull to relieve pressure. MRI taken. Lot of bleeding in brain - aneurysm lead to death approximately 14 hours after initial symptoms.

01/12/2021 My dad got the Moderna Vaccine on Tuesday, January 12, 2021 in his left arm at the Mall injection site for the Health Department. He was told that the side effects could mean his arm hurting, tiredness, headache, and even a low grade fever. Additionally, the site informed us both (as I was with him to get the injection) that this was all normal and not to seek medical attention unless these symptoms last longer than 72 hours. That evening, my dad was experiencing all of those symptoms, and went to bed at 7pm. A little after 10am on Wednesday, January 13, 2021, when he awoke, my dad went to the bathroom vomiting. This was where he collapsed and went into cardiac arrest. Fire/Rescue was dispatched about 10:30am after my mom started CPR. County Fire Rescue EMTs and Paramedics continued CPR and other attempts at reviving him all the way to Hospital Emergency Department. He was pronounced dead at 12:14pm on Wednesday, January 13, 2021. We have no doubt my dad, following the instructions of the injection facility, thought he was just experiencing the side effects of the vaccine. He had no chance. Had this injection been done in the RIGHT arm, perhaps he could have recognized the arm numbness being that of an impending heart attack. We really miss Dad. He served this country with distinction for over 50 years, and we believe his country failed him.

01/11/2021 Resident received 1st on 1/11/21 at 12:10am (1/12/21) resident was found unresponsive. Code Blue, 911 called at 12:11am. FD and EMS arrived, resident pronounced at 12:51am.

01/11/2021 Client's wife reported on 1/18/2021, that her husband died unexpectedly the day after receiving the COVID 19 vaccine. I called and spoke with her. She stated that the client had started experiencing some tightness in his chest the evening of 1/11/2021. She stated that it was normal for him to have the tightness in his chest if he got stressed. She stated that she found him on the garage floor on 1/12/2021 at 2120. He was taken by ambulance to the hospital. She stated that the hospital told her that his COPD had caused him to go into arrhythmia.

01/10/2021 Admitted to hospital after vaccination with Acute hypoxemic respiratory failure, Septic shock; Aneurysm of arteriovenous dialysis fistula; expired 1/16/2021

01/02/2021 Patient was sent to the ED due to significant hematuria. He was afebrile.

01/22/2021 Within 15 minutes of the injection, the individual became aphasia and stroke like symptoms. She was taken to the ER where she was later diagnosed with a cerebral hemorrhage and passed away.

01/14/2021 Daughter call in for VAERS report to file for father whom committed suicide

1/16/2021 in the AM after reportable ae of COVID 19 vaccine administered 1/14/2021. Patient sought care twice at ER; first visit by ambulance around 5PM and Friday 1/15/2021 Medical Center: Emergency Room. 1st Discharge summary diagnosis: adverse reaction to COVID shot; 2nd Discharge summary diagnosis: adverse reaction to COVID shot, fever, Panic Disorder-- ER. Medical Center Discharge summary diagnosis: Adverse reaction to the vaccine, acute anxiety. Reportable patient symptoms at, 1st visit : fever, shaking stomach cramps, breathing issues. Medical Center -- No fever, confusion and dementia type, patient would not stay in patient bed; patient would get up and sit down again repeatedly, agitated and anxious. Attempted to urinated hospital bed. Patient committed suicide in home.

01/14/2021 Extreme Fatigue

01/12/2021 Cardiac arrest within 1 hour Patient had the second vaccine approximately 2 pm on Tuesday Jan 12th He works at the extended care community and was in good health that morning with no complaints. He waited 10-15 minutes at the vaccine admin site and then told them he felt fine and was ready to get back to work. He then was found unresponsive at 3 pm within an hour of the 2nd vaccine. EMS called immediately worked on him 30 minutes in field then 30 minutes at ER was able to put him on life support yet deemed Brain dead 1-14-21 and pronounced dead an hour or so later

01/12/2021 DEATH Narrative:

01/12/2021 Patient noted to have a change in status at 11:23PM that night. Her oxygen saturation had dropped from normal on room air to 82% and required oxygen. She was also noted to be lethargic with altered

mental status and not responding verbally. She then began to mottle. Her oxygen saturation worsened to 51% on 4Liters of oxygen by the next day and she expired on 1/14/21.

01/06/2021 3:07 pm lung sounds diminished oxygen sats 68%, oxygen applied Oxygen sats remained low for next 36 hours (patient on Hospice care) expired 6:22 am 1-8-21

01/05/2021 vomiting later on 01/05/21. Lethargy and hypoxia in pm of 01/06/21. Hypotension am of 01/07/21. Hospitalized, intubated, cardiac arrest, died 01/07/21.

01/04/2021 he passed away; not responsive; mind just seemed like it was racing; body was hyper dried; Restless; not feeling well; ate a bit but not much; kind of pale; Agitated; Vomiting; trouble in breathing; This is a spontaneous report from a contactable consumer (brother of the patient). A 54-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration, on 04Jan2021 (at the age of 54-years-old) as a single dose for COVID-19 immunization. Medical history included diabetes and high blood pressure. Concomitant medications included metformin (MANUFACTURER UNKNOWN) taken for diabetes, glimepiride (MANUFACTURER UNKNOWN) taken for diabetes, lisinopril (MANUFACTURER UNKNOWN), and amlodipine (MANUFACTURER UNKNOWN). The patient experienced not feeling well, ate a bit but not much, kind of pale, vomiting, trouble in breathing, and agitated on 04Jan2021; body was hyper dried and restless on 05Jan2021; mind just seemed like it was racing on 06Jan2021; and not responsive and he passed away on 06Jan2021 at 10:15 (reported as: around 10:15 AM). The clinical course was reported as follows: The patient received the vaccine on 04Jan2021, after which he started not feeling well. He went right home and went to bed. He woke up and ate a bit but not much and then was kind of pale. The patient then started to vomit, which continued throughout the night. He was having trouble in breathing. Emergency services were called, and they took his vitals and said that everything was okay, but he was very agitated; reported as not like this prior to the vaccine. The patient was taken to urgent care where they gave him an unspecified steroid shot and unspecified medication for vomiting. The patient was told he was probably having a reaction to the vaccine, but he was just dried up. The patient continued to vomit throughout the day and then he was very agitated again and would fall asleep for may be 15-20 minutes. When the patient woke up, he was very restless (reported as: his body was just amped up and could not calm down). The patient calmed down just a little bit in the evening. When the patient was awoken at 6:00 AM in the morning, he was still agitated. The patient stated that he couldn't breathe, and his mind was racing. The patient's other brother went to him and he was not responsive, and he passed away on 06Jan2021 around 10:15 AM. It was reported that none of the symptoms occurred until the patient received the vaccine. Therapeutic measures were taken as a result of vomiting as aforementioned. The clinical outcome of all of the events was unknown; not responsive was not recovered, the patient died on 06Jan2021. The cause of death was unknown (reported as: not known by reporter). An autopsy was not performed. The batch/lot number for the vaccine, BNT162B2, was not provided and has been requested during follow up.; Reported Cause(s) of Death: not responsive and he passed away

01/03/2021 Resident received Covid Vaccine, noted after 30 mins with labored breathing BP 161/77, HR 116, R 38, T 101.4,

01/02/2021 1-2-2021 10:30 PM Complained Right arm/back hurt - took Tylenol 1-3-2021 Complained Right arm hurt, dizzy 1-4-2021 Felt better - did laundry, daughter found her deceased at 3:30 pm. Dr. at hospital said it was "cardiac event" according to death certificate.

01/23/2021 Patient presented to the Emergency Department complaining of chest pain, pale, cool diaphoretic, and hypotensive. The patient was discovered to have a large saddle pulmonary embolism, went into cardiac arrest and expired. Of note, the patient received her second Moderna COVID vaccine on 1/23,

which would place her first one approximately 12/25 if she received them at the appropriate interval. This information is from the patient's daughter and the ED record, the information is not available in CAIR. Per the daughter, the patient started feeling ill on 1/21, improved on 1/25, and then acutely worsened on 1/27, resulting in the ED visit.

01/20/2021 per daughter pt suffered a stroke 1 hour after he was given the covid vaccination. he passed away on 01/24/2021.

01/18/2021 Fever Feeling tired short of breath all night and morning after the vaccine My grandma had to be intubated and then passed away to a heart distress we think it was the vaccine because she was fine even with dialysis. When she got the vaccine it took hours and her health conditions changed.

01/15/2021 The patient had severe shortness of breath resulting in cardiac arrest on the 5th day after the vaccine. Shortness of breath started 12 hours after injection. On the 5th day, the patient was discovered to also have a rash throughout his body, but it is unknown when this rash started.

01/05/2021 Patient died, I have a copy of his vaccination card

01/07/2021 51 year old M with h/o O2 dependent COPD, Severe pulmonary fibrosis became increasingly hypoxic around 1800hours 1/7/2021. He was transported to hospital for acute on chronic hypoxia respiratory failure. On 1/12/2021 he decompensated further, and after discussing with family and palliative care, He was changed to comfort care. He expired on 1/12/2021@2325 at medical center.

01/11/2021 Fatigue, muscle aches, vomiting, hematoma

01/09/2021 presented to ED 1/9/21 with abdominal pain, progressive worsening weakness and fatigue and new onset A fib with RVR likely due to hypertensive urgency . Patient progressed clinically with severe hypoxia and transferred to ICU and started on BiPAP; progressive decline with decreased urinary output with uremia likely secondary to sepsis. Concern with patient worsening clinical decline, palliative care had been consulted on end of life care. Patient expired 1/17/21

01/05/2021 VACCINATION WAS RECEIVED THE MORNING OF 1/5/2021- IN THE EVENING OF THAT DAY RESIDENT SUSTAINED A FALL AND WAS TRANSPORTED TO FACILITY FOR TREATMENT. IT IS NOT UNUSUAL THAT RESIDENT WAS SELF TRANSFERRING AND HAS A HISTORY OF FALLS.

01/05/2021 Patient began to demonstrate a cough the evening of 1/5/2021, after receiving the COVID-19 vaccine earlier in the afternoon. A rapid COVID-19 test was performed and was positive. She began to demonstrate shortness of breath with exertion on 1/7/21, and lethargy on 1/12/21. Appetite and oral intake began to decline on 1/12/21, and Oxygen saturation dropped on 1/16/21 to 82%, and oxygen was initiated at 3L per nasal cannula. On 1/19/21 at 0414 patient was unresponsive and without vital signs. Orders were for DNR, and CPR was not initiated.

12/30/2020 All residents had been in isolation due to multiple cases of COVID in the facility. Resident voiced no health related complaints. He continued to visit with staff and required moderate assist with toileting. Resident had fall 0130 on 1-15-2021, which resulted in laceration with surgical repair. Resident was noted to change in mental status and respirations on morning of 1-16-2021 during morning blood sugar check. Resident had O2 @1.5l/m via n/c and respirations of 10 with periods of apnea and unresponsive to verbal stimuli. Blood sugar was 583. Resident deceased upon re-check after calling PCP to report status change.

12/30/2020 Patient became sick 3 hours after the vaccine and was found deceased 1 day after his vaccination. He passed away in his sleep.

12/30/2020 Per Nursing Staff- patient died within 24 hours of receiving the vaccine. patient has hospice. Please contact director of nursing for more details.

12/30/2020 per staff at facility patient died 24 hours post vaccination. Please contact Director of Nursing for further details.

01/26/2021 Systemic: Other- Death

01/22/2021 Systemic: patient had no known medical history per supervisor

01/20/2021

The patient received his vaccine in the morning of 1/20/2021, while getting into car to go see his pulmonologist, about 2 hours after, collapsed, unresponsive with asystolic cardiac arrest. No symptoms prior other than chronic dyspnea. No allergic type symptoms reported by family. Asystole with EMS, no response to ACLS, presented to ED, DOA.

01/20/2021 Presented with stroke like symptoms at 10:30, right sided weakness and slurred speech. 911 was call, patient was transported to hospital. Per ED note, patient experienced TIA which resolved, acute exacerbation of CHF. Patient was admitted. Discharge summary on 1/22 indicates same diagnosis, plan was home with hospice. Family notified hospital on 1/25 that patient had expired on 1/23 at home.

01/19/2021 Patient was vaccinated on 01/19/21 using the Pfizer COVID-19 vaccine. He completed a 30 minute observation team. Later in the day after the vaccination team had already departed the facility, patient had a seizure and passed away.

01/19/2021 Systemic: Other- unknown, depot store received call from facility on 1/22 that patient passed around 7pm

01/16/2021 Patient was vaccinated in right arm. Within 5 to 10 seconds after vaccination, patient started clenching his hands tightly and became unresponsive. Patient was lowered to the floor and did not exhibit a pulse. CPR was initiated and 911 was called. An AED was used and healthcare professionals onsite continued compressions until the paramedics arrived.

**01/16/2021 Systemic: Pt monitored by nursing for 30min after inj,pt was stable/no reaction.At ~1hr post inj
pt was unresponsive.Pt was a hospice/dnr per director**
