CASE STUDY 1 - STATE OF TEXAS USA

PART 1 : MODERNA VACCINE DEPLOYMENT

**Identification of Moderna Vaccine Batches Associated with Deaths,
Disabilities and Life Threatening Illnesses following Vaccination in the State
of Texas**

ALPHABETIC BATCH CATEGORIES RESPONSIBLE

Degree of severity decreases as the alphabetic batch code ascends

- J,K,L,M series is alpha-numerically distinct from A, B, C, D, E, F, G, H series
- J, K, L batch categories show excessive toxicity as measured by number of adverse reactions.
- J, K, L batch categories show excessive spread compared to other categories
- All J, K, L, M batches end with batch code designation 20A, whilst all A, B, C, D, E, F, G, H batches end with batch code designation 21A

These 4 distinctive characteristics may indicate that J, K, L, M batches were testing a qualitatively different product upon the population in Texas – a different formulation – different ingredients to the succeeding batches A, B, C, D, E, F, G, H

Linear decline of adverse effects from M to D whilst maintaining constant spread (standard deviation) may indicate that dosage was being varied. Pharma may have been establishing the LD50 (Lethal dosage) limit.

The alphabetic letters appear to designate distinct ranges of toxicity, that change in a stepwise, linear fashion— suggesting that the alphabet letters may have been used as labels, so pharma could monitor and record the effects of different experimental conditions (ingredient variation and/or concentration variation)

SAFETY ISSUE

There is wide variations in adverse reaction numbers - a 10 fold difference between D, E, F, H batches and J, K, L, M batches).

Texans taking vaccine from J, K, L, M batches were exposed to

- 10 x the risk of adverse reactions
- 10 x the risk of death
- 10 times the risk of disability

This may indicate poor manufacturing and poor quality control. However the systematic labelling of these quality-control “mistakes” , and the linearity and step wise nature of their appearance suggest that variation may have been caused by deliberate experimentation rather than accidental spoiling.

RECALLS

In January 2021, California recalled batch 041L20A after it caused extensive adverse reactions.

<https://www.latimes.com/california/story/2021-01-18/moderna-vaccine-allergic-reaction-california-batch>

A “higher than usual” number of patients who received the vaccine appeared to be suffering from allergic reactions. Their symptoms were severe and required medical attention, Pan said.

Dr. Eric McDonald, San Diego County’s director of epidemiology, said during a livestreamed news briefing Wednesday that operations at Petco Park slowed down after six healthcare workers who had just been vaccinated had apparent allergic reactions....

No other cluster of issues, or individual issues, have been reported with the Moderna batch, lot 041L20A, which was distributed to 287 medical providers across the state, officials said. The batch arrived in California between Jan. 5 and Jan. 12.”

| BATCH | ADRs |
|-----------|------|
| 039k20a | 5010 |
| 026L20A | 4274 |
| 011J20A | 3817 |
| 013L20A | 3272 |
| 025L20A | 3214 |
| 012L20A | 3162 |

| 030M20A | 1804 |
| 044a21a | 1797 |
| 015M20A | 1761 |

However California failed to recall the other L series batches all of which caused the same or greater number of adverse reactions.

041L20A was fully deployed in Texas, along with other L series batches.

13 deaths, 20 people rendered disabled, and 23 life threatening illnesses followed vaccination by L series in Texas.

L series occupies more than 50% of the top most toxic 22 batches from Moderna. 14 out of 22 of these batches were L series
